

SEASON 2024-25

Our guiding light

Nature is honest, it doesn't lie or discriminate. It makes it clear when you cross the line. Its teachings can go from a quiet whumpf to a roaring avalanche in an instant. Science helps interpret nature's teachings and the science is clear; our society is out of balance with nature. We are taking more from the planet than we give.

A deep respect for nature has been our guiding light at Jones from the start. We make durable products that embrace the latest performance technologies, while manufacturing our gear as responsibly as possible, and giving back to nature by supporting non-profit organizations addressing the climate crisis.

We strive to make our products more responsibly every year. Understanding the impact of every facet of our gear, from materials to manufacturing to end-of-life is how we get better. We have a microscope on all these impacts which allows us to see where the biggest improvements can be made.

This season we have two huge wins in our quest to make gear more responsibly that have been years in the making. All our outerwear, packs and softgoods are now 100% PFAS-free and all our snowboards and splitboards are now Fair Trade certified. Eliminating PFAS helps ensure that hard to break down "forever chemicals" are not produced in the first place and won't end up in nature. Becoming Fair Trade certified ensures the people who make our boards are treated fairly and work in a safe environment.

Knowing that we're doing everything we can to reduce our impact allows us to focus on making instruments of stoke you can feel good about using to tap in, tune out and make the most of your time in the mountains. Whether it's the breathability and protection of our outerwear on the way up, or the edge hold and float of our boards on the way down, we make equipment you can trust so you can dance down the mountain to whatever beat moves you.

JEREMY
JONES

Rooted in Adventure
Obsessed with Performance
Committed to our Planet

PROUD MEMBER OF

WE BELIEVE THERE IS A BETTER WAY

Our Design Ethos

Eco-Performance

We strive to make products with the least impact on the planet possible, but we trust our lives to our gear so we must value performance foremost. We test new materials and production processes to make sure we never sacrifice performance or durability just to make a product more responsibly. Durability is also critical as the longer gear lasts, the less waste that goes to the dump. This ECO-Performance design philosophy is the foundation upon which everything we make is made.

Responsibility

To make gear in the most responsible way possible, we strive to minimize the impact of our materials and manufacturing processes however we can. All of our snowboards, splitboards and outerwear contain recycled materials, and they always have. Our boards are also made in a factory that runs on 100% solar power, and the fabrics we use in our outerwear are Oeko-Tex and/or Bluesign® certified - the two leading responsible material certifications in the apparel industry.

Innovation

From our groundbreaking board shapes to our trailblazing outerwear designs, we never settle for anything less than game changing gear performance. By keeping an open mind to new gear concepts, materials and production processes we aspire to do things differently, and make innovative gear and outerwear that blends comfort, durability and industry leading responsible manufacturing practices with standard setting performance.

Manufacturing

Our network of factory partners helps us set new responsible manufacturing standards.

100%

Solar power

As of May 2020, all Jones snowboards and splitboards are made with 100% solar power. Switching our snowboard and splitboard production to 100% solar made a 89% reduction in CO₂ compared to non-solar powered production.

100%

Socially responsible factories

All of our apparel is made in socially responsible factories that are Business Social Compliance Initiative (BSCI) and Worldwide Responsible Accredited Production (WRAP) certified. These certifications guarantee that the people who make our apparel receive fair salaries and work in a safe and clean working environment.

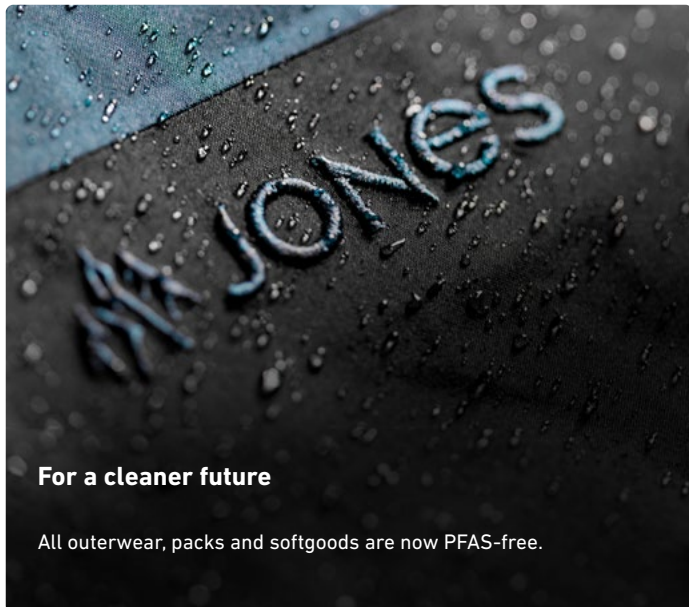

100%

Committed to our Code-of-Conduct

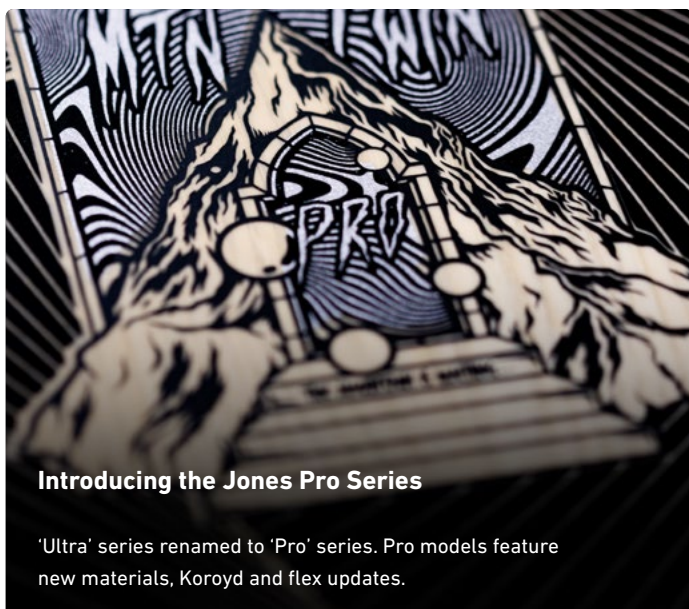

All of our factory partners have signed our Code Of Conduct that guarantees the people who make our gear are treated fairly and have safe working conditions.

2024-25 Marketing stories

For a cleaner future

All outerwear, packs and softgoods are now PFAS-free.

Introducing the Jones Pro Series

'Ultra' series renamed to 'Pro' series. Pro models feature new materials, Koroyd and flex updates.

Making boards by fair means

All snowboards and splitboards are now Fair Trade Certified, an industry first. Fair Trade helps empower workers and protect the environment.

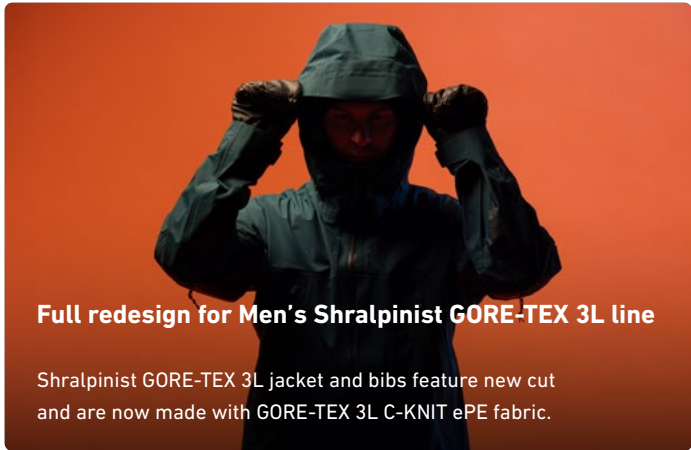

The next chapter of Re-Up Tech

Re-Up Tech project focused on solidifying the supply chain of dead boards and expanding the collection partner network.

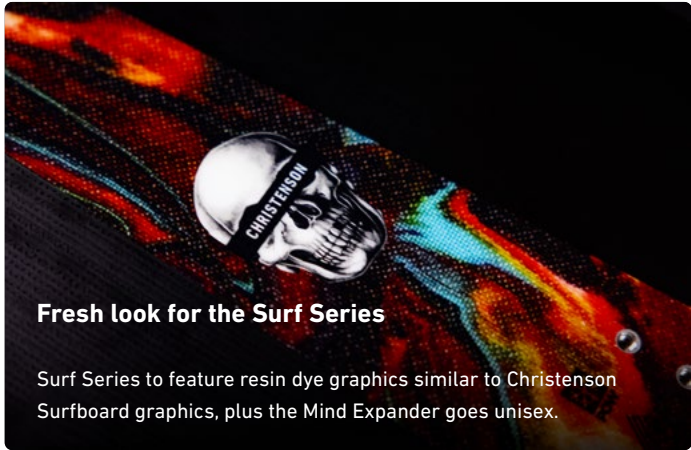

A Tweaker for all

New Women's Tweaker and Tweaker Pro offer more riders this innovative shape's unmatched freestyle performance.

Full redesign for Men's Shralpinist GORE-TEX 3L line

Shralpinist GORE-TEX 3L jacket and bibs feature new cut and are now made with GORE-TEX 3L C-KNIT ePE fabric.

Fresh look for the Surf Series

Surf Series to feature resin dye graphics similar to Christenson Surfboard graphics, plus the Mind Expander goes unisex.

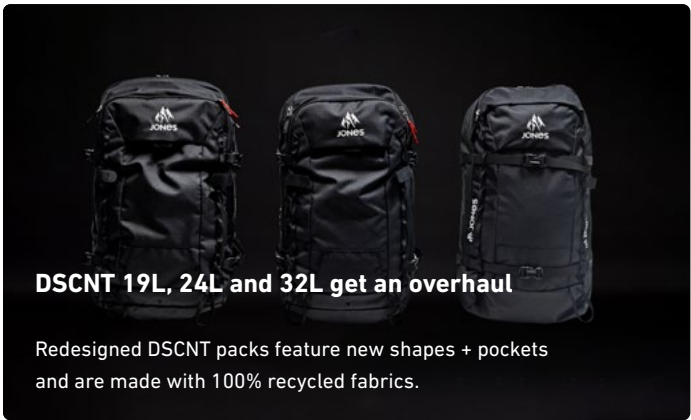

Second coming of the Storm Chaser

All new completely redesigned Storm Chaser featuring a longer swallowtail and a Surf Camber profile.

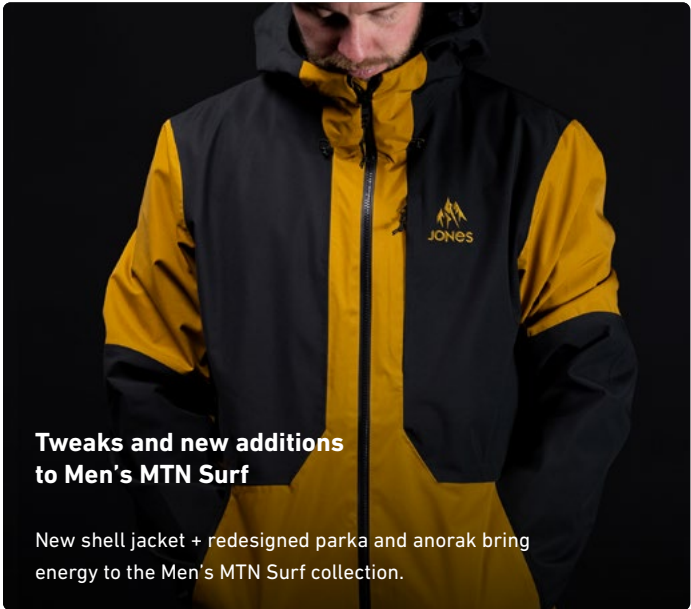

Introducing the Rally Cat

All new directional twin made for aspiring all-mountain riders looking for a playful board with Jones' signature performance.

DSCNT 19L, 24L and 32L get an overhaul

Redesigned DSCNT packs feature new shapes + pockets and are made with 100% recycled fabrics.

Tweaks and new additions to Men's MTN Surf

New shell jacket + redesigned parka and anorak bring energy to the Men's MTN Surf collection.

Equipment you can trust.

Profiles

Christenson Surf profiles

Custom tip/tail rocker profile designed by surf shaper Chris Christenson for the Mountain Surfer and Storm Chaser. The nose rocker starts just inside of the front inserts and the tail rocker starts just at the back inserts.

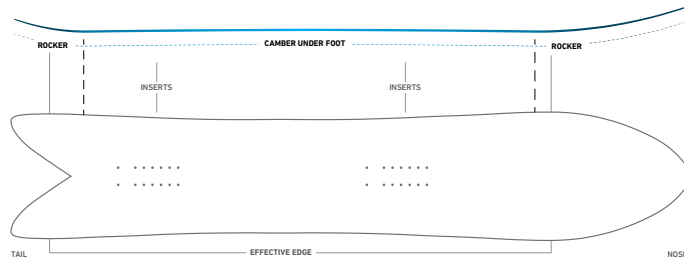

Christenson Surf Rocker

DRAWING OF THE MINI MIND EXPANDER, SIZE 138

When you weight the tail of the board the nose ramps up out of the snow for insane float on the deepest days. These subtle rocker contours match a Christenson surfboard rocker profile

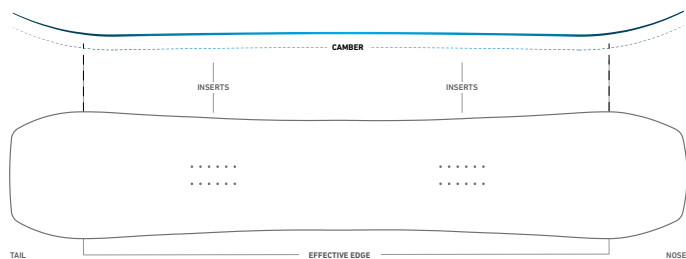

Christenson Surf Camber / Rocker

DRAWING OF THE STORM WOLF, SIZE 168

True Camber

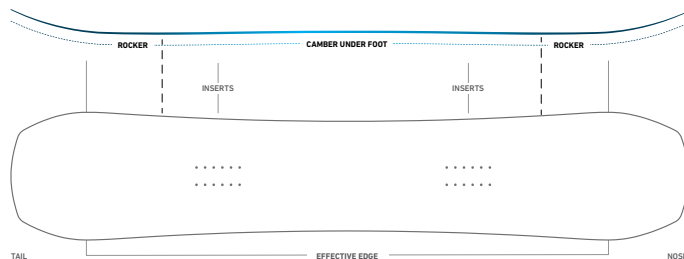

A traditional full camber profile that offers the insane edge response of camber without the usual hang-ups. The camber radius tapers into the beveled 3D Contour Base at the tips which releases the edges where they like to hook and balances the pop and directional stability of camber with a looser, less-catchy feel.

DRAWING OF THE MEN'S AVIATOR 2.0, SIZE 158

CamRock

A unique rocker/camber flex pattern defined by evenly balanced tip and tail rocker and camber between the bindings. CamRock improves freestyle finesse by keeping your tips playful while maintaining the power and pop of camber underfoot.

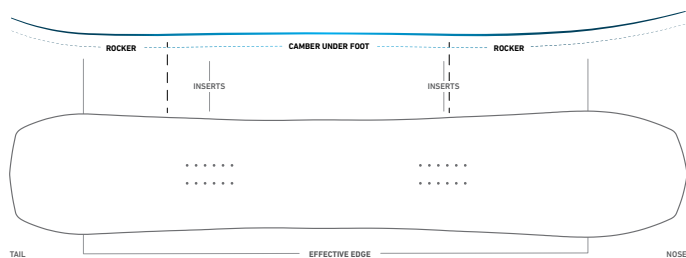

DRAWING OF THE MEN'S MOUNTAIN TWIN, SIZE 157

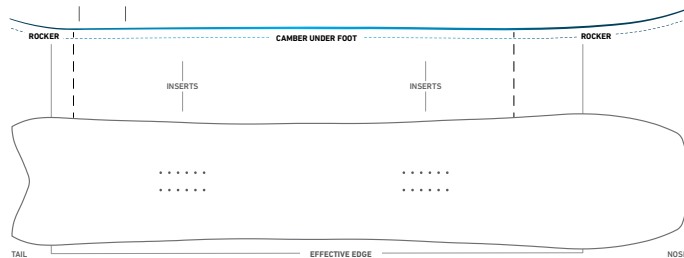

Directional Rocker

A hybrid rocker/camber flex pattern defined by more tip rocker than tail rocker and camber between the bindings. The rockered tips floats the board's nose and improves maneuverability while the camber underfoot

provides edge hold and response. A slightly rockered tail maintains the power and stability of a traditional board but helps keep the tail catch-free initiating turns and landing switch.

DRAWING OF THE MEN'S FLAGSHIP, SIZE 161

DRAWING OF THE HOVERCRAFT 2.0, SIZE 156

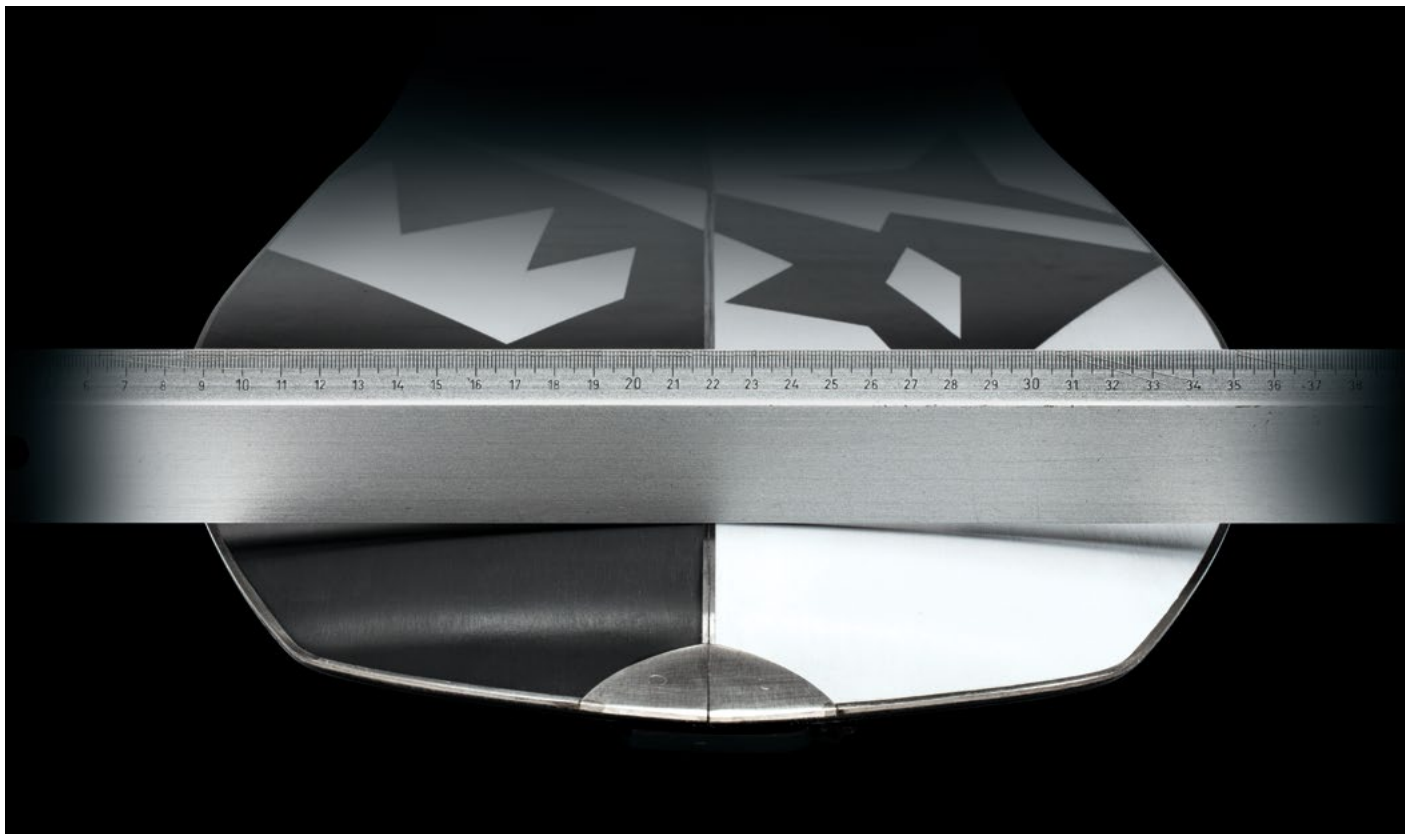

“

My experience is that most falls in freeriding start from the nose of the board – you either go over the bars in powder, the nose gets caught under a weird crust and tosses you, or you hit a hard transition at the contact point of the tip and get bucked. Directional Rocker eliminates most of these falls.

JEREMY JONES

3D Contour Bases

Next level technology for ultimate response

Nobody wants a choppy and rough run. The descents you dream about are dynamic and smooth. Inspired by the rounded bottom contours of surfboards, 3D Contour Bases are designed to make every run smoother and every turn more effortless by reducing the drag of the board tips. 3D Contour Bases enhance glide and improve float helping you ride faster and with better flow.

Glide

3D Contour Bases enhance glide. The smooth radius of the nose and tail edges reduce friction at the contact points. With less friction and catch in the tips, you can maintain more speed.

Flow

3D Contour Bases deliver unmatched turn flow and fluidity. Just like the nose and tail on a surfboard, the rounded tip and tail edges eliminate catch as you transfer pressure edge-to-edge. Turn initiation is effortless because you can roll the board on to the edge instead of tip the board on the edge. Once on edge, camber and Traction Tech lock in your turn.

Float

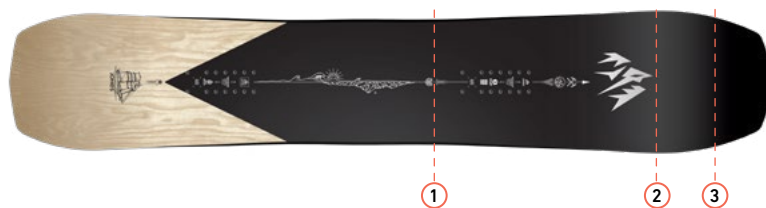

3D Contour Bases enhance glide. The smooth radius of the nose and tail edges reduce friction at the contact points. With less friction and catch in the tips, you can maintain more speed.

“

On a surfboard, the subtle shaping of the nose is what makes the entry into a turn so smooth and fluid. The feeling of an effortless surf turn is what inspired the development of our 3D Contour Bases. Instead of having to abruptly tip the board into a turn, 3D Contour Bases let you roll your edge into a turn. I've been on a quest to design a snowboard that offers the free friction glide and edge-to-edge fluidity of a surfboard for years. 3D Contour Bases cracked the code on how to achieve this next level of board performance.

JEREMY JONES

1

2

3

1 Center

The center of the board is perfectly flat with no spoon bevel on the edges between the contact points. The flat base allows instantaneous edge engagement between the feet when you lean into a turn.

2 Contact points

The spoon bevel starts at the contact point. The bevel increases very gradually so there is not an abrupt transition between the flat center of the board and the raised tip and tail edges.

3 Nose and tail edges

The spoon bevel is most defined at the tip and tail of the board. The rounded edges at the tips reduce edge catch and drag.

Riding flat

When riding flat, the spoon bevel on the edges is not engaged, but it does help smoothly deflect snow away from the nose of the board.

Turn initiation

As you begin to make a turn the spoon bevel helps you smoothly roll the board on to your edge with less friction and edge drag.

Mid-turn

In the middle of a turn camber and traction tech keep you locked onto your edge in the center of the board while the spoon bevel reduces the "plow effect" of your nose and tail edges.

The unique riding personality of each board in our collection demanded we develop multiple 3D Contour Base designs. Not every model would benefit from the same amount of spoon bevel. Each 3D Contour Base design is matched to the attitude of the board.

3D Contour Base 3.0

Freeride focused 3D Contour Base featuring 7mm of spoon bevel in the nose and 0 to 7mm of spoon bevel in the tail. Spoon bevel starts at the rocker point.

DRAWING OF THE MEN'S FLAGSHIP, SIZE 161

3D Contour Base 2.0

Moderate 3D Contour Base featuring an even balance of 4mm spoon bevel in the nose and 4mm spoon bevel in the tail. Spoon bevel starts at the rocker point.

DRAWING OF THE MEN'S AVIATOR 2.0, SIZE 158

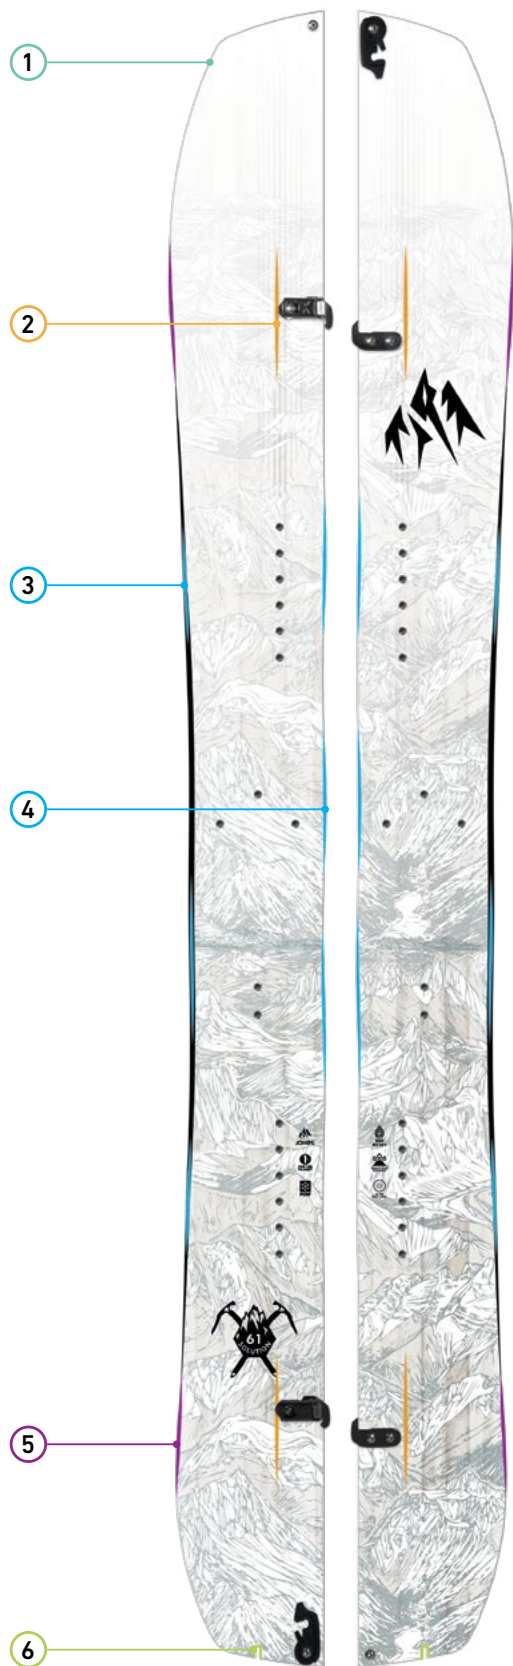

3D Contour Base 1.0

Subtle yet effective 3D Contour Base featuring an even balance of 2mm spoon bevel in the nose and 2mm spoon bevel in the tail. Spoon bevel starts just after the rocker point.

DRAWING OF THE MEN'S FRONTIER, SIZE 159

Shape Tech

1 Blunt nose

"How a board glides in powder, crust, corn or any snow more than an inch deep, is dictated by it's front contact point and just past it. Next time you are in soft snow watch how much snow comes over the corner of the nose near the contact point. The billowing snow coming out from behind the tip means you are plowing through it which is obviously slowing you down. By adding a blunt nose you get the float benefits of a much longer nose without the 'snow plow' rounded tip and it's extra swing weight."

—Jeremy Jones

2 Boltless bridge

The Boltless Bridge eliminates split clip attachment hardware from the base of the board by re-profiling the wood core at the clips. The wood core under the clips is thicker providing better torsional stiffness and a more powerful connection at the split clips.

3 Traction Tech

Like a serrated knife slicing into the snow, Traction Tech improves your edge grip by adding multiple contact points along the running length of your board.

"Traction Tech is a critical feature for rockered boards. Rocker improves glide in mixed conditions, but the decreased edge contact makes it harder to really lock into your turns and hold a solid edge. Traction Tech is crucial to offset the edge drift of rocker."

— Jeremy Jones

Traction Tech 3.0

Traction Tech 3.0 features three bumps per edge (front binding, board center, back binding). The middle bump is slightly bigger than the outside bumps for better grip.

4 Inner edge Traction Tech

Inner edge Traction Tech improves splitboard edge grip on ascent. Three side cut "bumps" on each side of your bindings keep you locked in on icy skin tracks no matter which way you are traversing.

5 Progressive sidecut

At the far ends of the sidecut, the radius is incrementally increased as the edge reaches the contact point. Gradually increasing the sidecut radius towards the contact point delivers smoother turn initiation and exit as the edge tracks in and out of the snow with a less abrupt transition.

6 Quick tension tail

Built-in climbing skin tension system using pre-cut notch that eliminates the need for a traditional skin tail clip.

CLIPS

100% Karakoram Split Clips

All Jones splitboards feature premium Karakoram Clips that deliver unmatched compression and board lock.

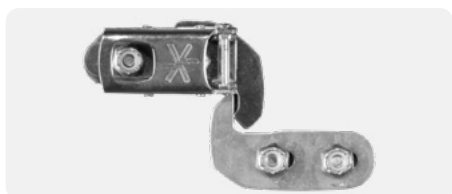

Karakoram Ultra Clips 3C with Tip-Lock

Karakoram Ultra Clips 3C feature a three point tension system. Ultralight and exclusive to Jones, these clips redefine split clip technology. They are also adjustable so you can maintain even compression as your splitboard ages.

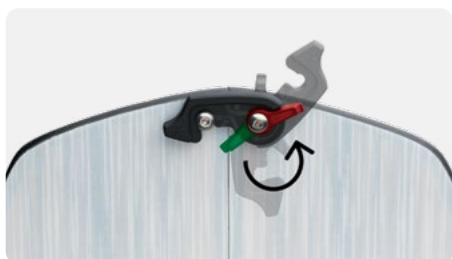

Karakoram Ultra Clips 2.0 with Tip-Lock

Karakoram Ultra Clips 2.0 are lighter weight, clamp tighter and have a smaller footprint than the original Ultra Clip. They are also adjustable so you can maintain even compression as your splitboard ages.

Karakoram Ultra 1.0 Clips

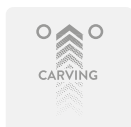

Karakoram Ultra Clips 1.0 remain some of the strongest and lowest profile split clips in the world. They deliver rock solid board lock and they are adjustable so you can maintain even compression as your splitboard ages.

Karakoram Tip-Lock tip clips

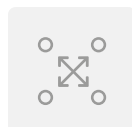

Every splitboarder knows the feeling – you drop into a firm line and your tip clip pops open! Never again. Using Active Joining Technology, the Karakoram Tip-Lock tip clips quickly lock and clamp the tips of your splitboard with the flick of a lever.

Insert packs

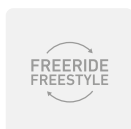

Carve Pack

Allows more centered stance option for riding firm snow.

Float Pack

Allows super setback stance for deep pow days.

Freeride/Freestyle Pack

Allows option to center or set back stance on sidecut as conditions demand.

Ingredients

Built with the finest tech and materials.

100% of our adult models feature high-end materials, construction technologies and responsible manufacturing processes. We accept no compromises in producing the most durable and responsibly produced snowboarding gear.

- **100%** Sintered Base
- **100%** Bio Resin
- **100%** 3D Contours Base
- **100%** Traction Tech
- **100%** Inner Edge Traction Tech
- **100%** Progressive Sidecut
- **100%** Recycled Abs Sidewall
- **100%** Wend Bio Wax
- **100%** Solar Built
- **100%** Sustainable Woodcore

BASES

100% sintered bases

All Jones adult models feature sintered bases. Our bases are made out of Ultra-High Molecular Weight polyethylene and are super durable and wax absorbent.

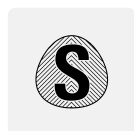

Ultra base

Jones exclusive base material that sets new performance standards. Lab results and snow testing show 25% better wax absorption, better glide in warm/wet snow and better durability for grinding. We've also doubled the amount of wax and mixed multiple wax types for a faster factory wax in a wider range of conditions.

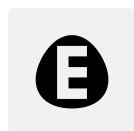

Sintered 9900 base

Premium base material made from Ultra-High Molecular Weight Polyethylene (UHMW-PE) and carbon. Base is highly wax absorbent, easy to repair and wicked fast.

Sintered 8000 base

Super durable base material made from Ultra-High Molecular Weight Polyethylene (UHMW-PE) and carbon. Base is easy to repair, easy to wax and super fast.

Extruded 5000 base

Classic base material that is super durable and easy to repair.

SIDEWALLS

100% recycled sidewalls

Every Jones board ever made was built with 100% recycled sidewalls.

Recycled ABS

ABS Plastic is one of the necessary evils of snowboard production. We improve the sustainability of our snowboards by using only recycled plastic.

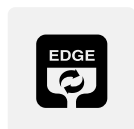

Recycled rounded ABS

Rounded sidewall finish that improves board durability by protecting topsheet from chipping.

EDGES

Recycled edges

From 2010 to 2025, every board ever made was built with partially recycled edges.

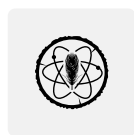

Oversizes recycled edges

Oversized recycled steel edges for added durability and improved production sustainability.

WOODCORES

100% responsibly sourced woodcores

All Jones woodcores are made with responsibly sourced wood. Every piece of wood we use in every board comes from a responsibly managed forest.

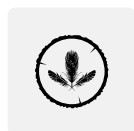

Fusion Core

The Fusion Core is our lightest wood core yet. Core is made from mostly paulownia with specifically positioned pockets of poplar for improved durability and response.

Power Core UPDATED

Triple-density full wood core featuring hardwood bamboo stringers for added pop and durability plus paulownia for weight savings.

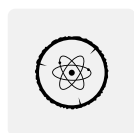

Ultra Core

Dual density premium wood core made of mostly paulownia with specially positioned poplar stringers for better durability and turn power.

Ultra Split Core

Dual density premium wood core made of mostly paulownia with specially positioned poplar stringers for better durability and turn power.

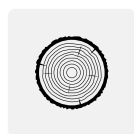

Control Core

Dual-density full premium wood core featuring a 2:1 paulownia to poplar stringer ratio that keeps core light but ultra damp.

Control Split Core

Dual-density full premium wood core designed specifically for splitboards 2:1 paulownia to poplar stringer ratio keeps core light yet ultra damp.

Classic Core

Full wood premium poplar core that offers fun pop, even flex and solid durability.

Bamboo Surf Core

Triple density Bamboo Surf wood core that features primarily paulownia stringers with bamboo stringers positioned in the pocket of the sidecut for better edge response and turn power.

CONSTRUCTION

Next level layups

We are laser focused on innovating how snowboards are made. Our most advanced boards feature our latest engineering breakthroughs.

Fusion Carbon

The Fusion Core is our lightest wood core yet. Core is made from mostly paulownia with specifically positioned pockets of poplar for improved durability and response.

Ultra Construction

Ultra Construction is the redefinition of what it takes to build a snowboard. We've tested every inch of the board to precisely position materials exactly where they are needed while eliminating all excess materials. Combining these innovative construction techniques with superlight wood cores and carbon fiber deliver revolutionary results. Jones Ultra boards are the lightest, yet most durable snowboards on earth.

Koroyd®

Award-winning synthetic core material developed for the aerospace industry. Koroyd is the lightest and dampest core material we've ever tested. It absorbs vibrations and adds response at a fraction of the weight of wood which enhances board control and riding confidence.

TOPSHEET

Responsibly sourced topsheets

All adult Jones topsheets are made with materials that are responsibly sourced. The majority of our models feature ECO-plastic topsheets and several feature wood veneer topsheets.

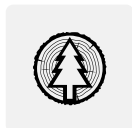

Eco-plastic topsheet

Bio-plastic topsheet made from Castor beans. This eco-material is ultralight, chip/scratch resistant and water/snow repellent (snow sticks less to topsheet).

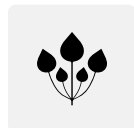

Ultralight eco-plastic topsheet

Super damp, durable and lightweight topsheet material made from organic plant material.

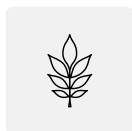

Engineered wood veneer

New composite wood veneer topsheets made from sustainable wood. Wood veneer topsheets dampen the ride and absorb board chatter.

Flax topsheet

Flax fibers are used in place of a traditional topsheet and offer a damp ride that absorbs chatter at any speed. Flax uses less resin in the board layup which saves more weight and synthetic materials.

Ash wood veneer

Thin ash wood veneer layer that functions as both a protective topsheet and a global reinforcement layer. The thin wood stringers that make up the topsheet provide even flex and suck up chatter from uneven snow conditions.

Textured eco-plastic topsheet

Bio-plastic topsheet made from Castor beans featuring a subtle texture for added durability. This eco-material is ultralight, chip/scratch resistant and water/snow repellent (snow sticks less to topsheet).

FIBERS

Premium laminates

Fibers are critical performance ingredients in snowboard constructions. We use responsibly sourced Flax fiber plus traditional Biax and Triax fiberglass.

Triax Fiberglass

Multi-axis, stitched fiberglass laminate that offers a precise and responsive ride in any terrain or snow conditions.

Biax Fiberglass

A dual-direction, dual-layer, stitched fiberglass laminate that provides a fun, forgiving and snappy ride.

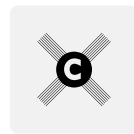

Reinforcements

The stringers we use match our Eco-performance design philosophy. The design of some models demand Carbon stringers, while several models feature sustainable Flax/Basalt stringers.

Web fused carbon

Carbon stringer pack that blends different widths of carbon matched to the specific needs of the board model. Made in the USA, EXCLUSIVE for Jones.

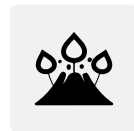

Carbon stringers

Carbon stringers add torsional stiffness for improved response and increased pop. Carbon layer keeps flex profile dimensionally stable for a consistent ride for the lifetime of the board.

Basalt Power stringers

Sustainable stringer made with 100% natural fibers. Basalt stringers improve torsional response and transfer power from under your feet to the tips of the board to help eliminate nose and tail chatter.

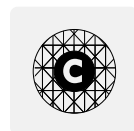

Flax/Basalt Power stringers

Jones exclusive sustainable stringer made with 100% natural fibers. Composite Flax and Basalt stringer helps transfer power to the edges, improves torsional response and absorbs board chatter.

Fiberglass reinforcement

Fiberglass layer improve pop in nose and tail plus increases the longevity of the flex profile. This lightweight layer helps the board perform the same on day 100 as it did on day one - precise and playful.

Carbon/Innega reinforcement UPDATED

Carbon Innegra fiber forms an ultra-tough hybrid composite layer that dampens the board torsionally and from tip to tail. Made in the USA.

OTHERS

100% ready to shred

Jones boards are de-tuned, waxed and ready to ride straight out of the wrapper.

Wend Natural Wax

Jones boards are ready to shred straight out of the shop and are factory waxed with WEND natural wax.

Forever Flex

Forever Flex is a manufacturing process that helps stabilize the flex and rocker profile of a board for it's lifetime. Our boards now finish the first stages of production slightly overbuilt and then we "break them in" using specialized machinery that mimics extreme riding use. By flexing the fresh board fibers and epoxy at the factory the materials settle in to their final arrangement within the board layup much the same as if you rode the board for 20 days. This process helps us narrow our production tolerances so the board you buy has a more accurate specified flex and rocker profile that will change less as you ride it more.

Factory tuned

All Jones Snowboards are factory de-tuned at the tip and tail so you can go right from the shop to the mountain.

Big Horn Series

The Big Horn Series identifies the boards in the Jones line designed for riders with big feet. These boards have a 26.3 cm or wider waist width for added performance on steep and hard snow. If you wear size US 11 boots or larger, look for the Big Horn Series sizes of most board models.

HIGH PERFORMANCE DESIGNS BUILT FOR DYNAMIC DESCENTS

Directional Freeride

Directional shapes that maximize float, speed and response for supreme
freeride performance and all-mountain versatility.

Jeremy Jones  Andrew Miller

Ultralight Butterfly Splitboard

The ultralight, technical objective splitboard

Lightweight, compact, stable, full camber
Ideal for high alpine expeditions and technical backcountry touring

The Ultralight Butterfly Split is an ultralight split made for high alpine pursuits where the balance of weight and performance are hyper critical.

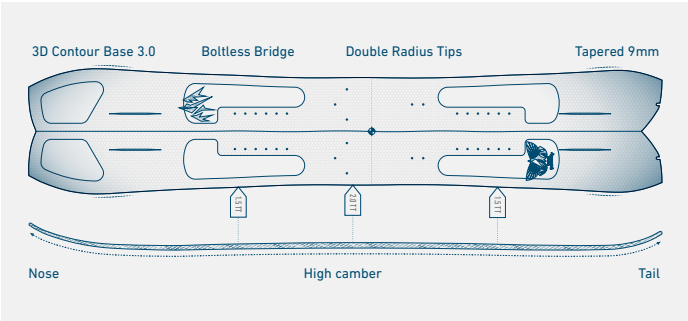

- Fusion Carbon construction to reduce weight
- Compact shape with long effective edge
- 3D Contour Base + Full camber profile for edge power

Terrain

Shape Tech

Shape	Profile	Personality/Flex
Directional	True Camber	Med stiff & lively - 4/5

Ultralight Hovercraft Split 2.0

One of the lightest splitboards on earth

Long tours, lightweight, versatile, floaty
Ideal for expedition touring and high alpine assaults

The Ultralight Hovercraft Split is one of the lightest, most technically capable splitboards on the planet and features a nimble and versatile shape.

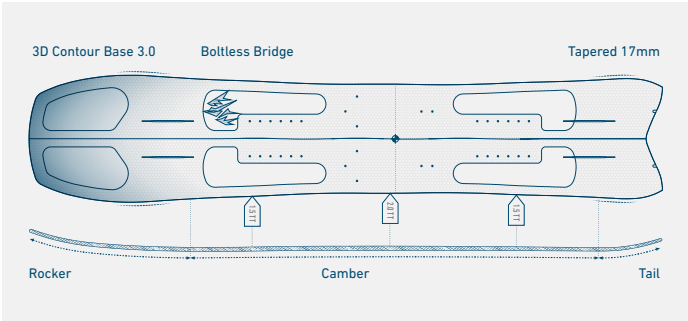

- Fusion Carbon construction to reduce weight
- Medium flex + tapered shape for nimble float
- 3D Contour Base + Directional rocker profile for float + grip

INSTRUMENTS OF STOKE

Surf Series

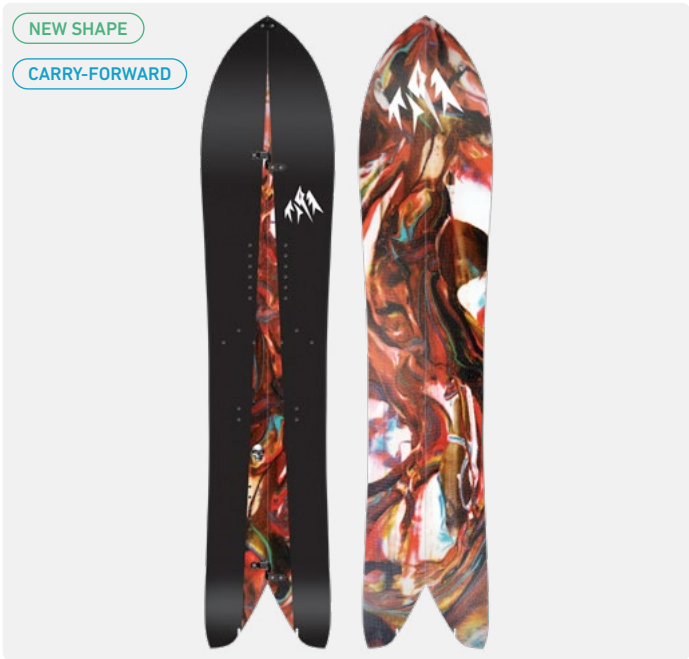

Surf inspired freeride and freestyle boards designed for slashing pow and finding fun in any terrain. Shaped by surf shaper Chris Christenson.

Storm Chaser Split

The backcountry surf slasher

Deep pow chaser, nimble, floaty
Ideal for surfing frozen waves and snorkel deep days

The Storm Chaser Splitboard unlocks access to those remote frozen swells and packs insane float into a short, but still high volume board.

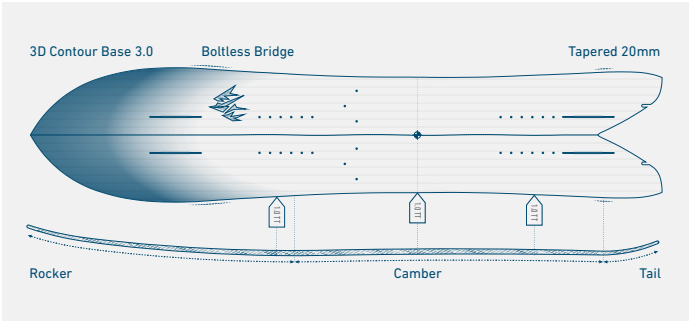

- High volume shape for max float
- 3D Contour Base + Surf Rocker profile for pow performance
- Short sidecut for nimble slashing

Terrain

FEEL THE POWER IN EVERY TURN

Snowboard Bindings

Garrett Warnick  Andrew Miller

Freeride mode VS Surf mode

Jones bindings offer customizable dampening and response by switching between Surf Mode and Freeride Mode. Surf Mode lets you tweak harder, while Freeride Mode keeps you locked in for maximum response. Switch modes by changing the bushings from soft (Surf Mode) to hard (Freeride Mode) and adjusting the Flip-It ankle straps. The Flip-It strap allows you to

interchange the ankle straps between the left and right binding to create custom response. Ride with the ankle straps in Freeride mode for more lateral support and board response or flip the straps into Surf Mode for solid heel support, but more ankle flexibility for getting loose.

Freeride mode

- Position the wide half of the strap above the buckle for more lateral support and board response
- Use Hard Bushings for maximum response

Surf mode

- Position the wide half of the strap below the buckle for solid heel support but more ankle flexibility for getting loose
- Use Soft Bushings for a looser, more dynamic surf feel

4x4, 2x4, EST/Channel disc

All Jones bindings include a mounting disc compatible with traditional 4x4 inserts, 2x4, and EST/Channel mounting system.

Asym buckles UPDATED

Bombproof buckles featuring ultra-strong levers and springs. Triple action ratchet design increase speed of entry and release.

Boot fit

MD	22 - 25	25.5 - 27.5

Durability

Designed for durability. Lifetime warranty on binding Hanger and Post. 1 year warranty on all other binding components.

PATENTED

SKATE TECH

The components of the Skate Tech design mimic the function of a skateboard truck. The "Hanger" acts as a lever that transfers energy input from the straps to the "Bushings" and onto the board edges. The "Kingpin" acts as the fulcrum for the "Hanger" and magnifies the energy transfer through leverage. Traditional bindings lose energy when the baseplate flexes and bends unevenly. The energy loss forces you to crank your straps

tighter and ride with more forward lean to gain the same control. Uneven pressure and tight straps lead to more foot fatigue and pain. By evenly pivoting over the "Post", the middle of your board flexes more uniformly and your energy inputs are focused directly on your edge. Your feet stay more relaxed and more comfortable because the bindings transfer power to the board with less work.

① Hanger 2.0 & 3.0

Hanger pivots on the kingpin like a lever, allowing lightning fast edge-to-edge energy transfer. True baseless design that delivers the most even board flex of any binding on the market.

② Kingpin

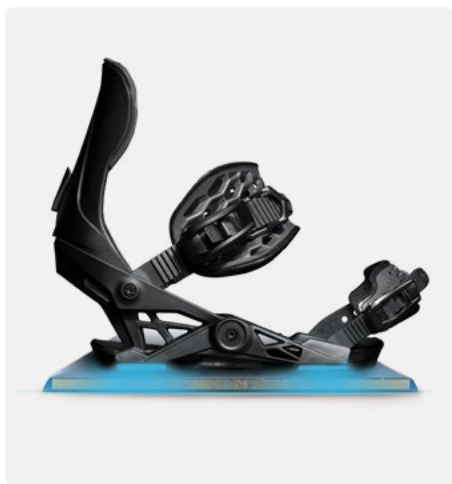

The kingpin is the fulcrum that the hanger pivots on. Design magnifies energy transfer and enhances board response through leverage,

③ Post

The post attaches the hanger to the kingpin and is the connection between binding and board.

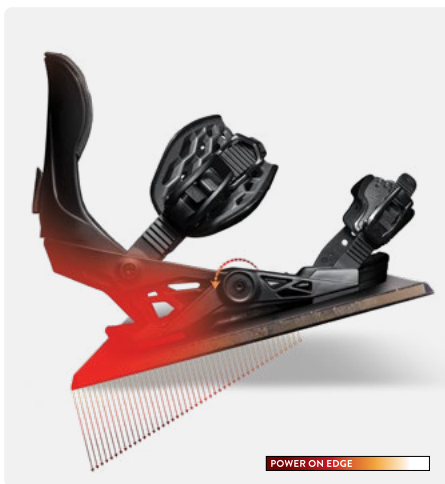

③ Bushings

Bushings are the primary binding contact point and offer customizable response and dampening (Surf mode vs Freeride mode).

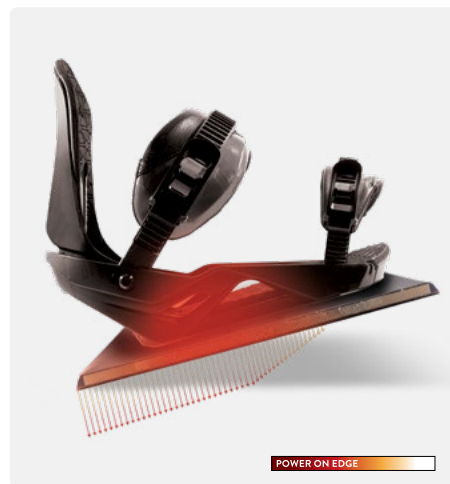

Riding flat

Skate Tech bindings feature a built-in dampening system for ultimate control bombing flat on your base. The baseplate rests on rubber bushings that absorb vibrations as you ride over rough snow. The binding also follows your every foot movement without altering the flex of the board and offers unmatched board feel for making micro edge adjustments as you ride flat.

Unmatched turn power

Power is transmitted directly to the edge. When you make a hard heel or toe turn the force you place on your straps and highback is transferred directly to your edge through the hanger, kingpin and post. By using the mechanical advantage of this pivot and lever system, Skate Tech bindings are the most responsive bindings in the world. Once on edge, you are locked in.

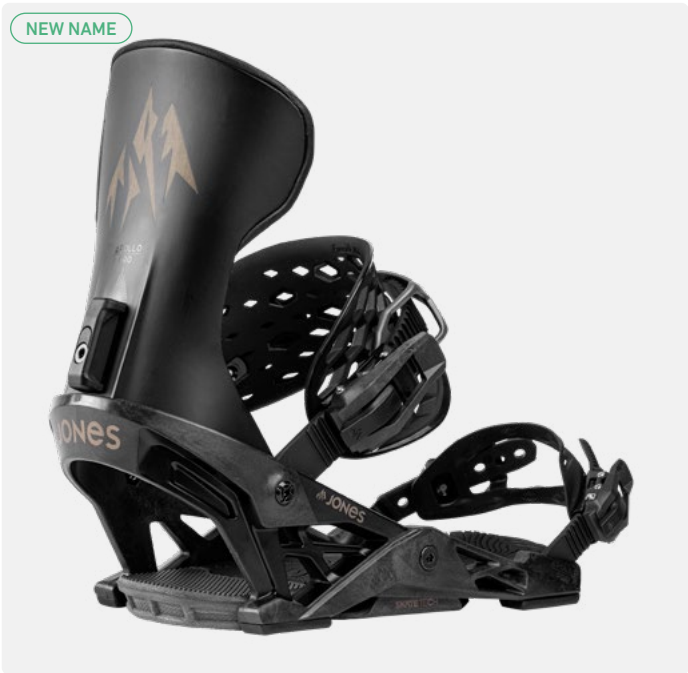

No comparison to traditional bindings

Power is transmitted through the center disk. When you make a hard heel or toe turn on traditional bindings the pressure you place on your straps goes into the fixed center disk and forces the binding baseplate to bend before power is delivered to the edges. Energy is concentrated at the center of the board with traditional rigid baseplates which decreases potential turn power compared to Skate Tech bindings.

Men's Apollo Pro

The ultimate freeride binding

Powerful, responsive, made for charging
Ideal for high powered freeriding and high speed carving

STEALTH BLACK

The Apollo binding is designed for expert freeriders who need unmatched edge control, response and comfort for riding fast and carving hard.

Skins technology

Made in Switzerland

Jones skins are made in Switzerland by one of the most innovative and trusted skin manufacturers in the world, POMOCA. For the last 40 years POMOCA has produced industry leading skins for high altitude ski mountaineering and randonee racing.

Glide Tech

Glide Tech coating reduces friction on each skin fiber so neither super-cold fresh snow or wet, hot snow will stick to the skin and rob energy-saving glide.

Rubber Safer skins

Jones skins are laminated with a rubber backing that prevents skins from getting waterlogged. Drier skins are safer as they are less likely to lose adhesion to your skis in critical situations.

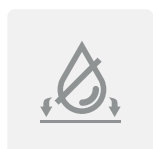

70 % Mohair / 30% Nylon

Jones Nomad and Nomad Pro climbing skins are both made with a blend of 70% mulesing free natural mohair fiber and 30% synthetic nylon. The mohair offers unmatched glide and a supple skin feel while the nylon improves grip and water repellency.

Grip Tech

Grip Tech skins are made with a special material that works well under dynamic tension and has a high resistance to twisting and abrasion.

Ever Dry (bluesign® approved)

Jones skins are treated with Ever Dry anti-glopping treatment. The coating keeps the skins from absorbing moisture and prevents snow/ice build-up under the skin.

RESPONSIBLE OUTERWEAR FOR EVERY ADVENTURE

Men's Outerwear

Jimmy Goodman 📷 Andrew Miller
