

BINDING USE TRICKS&TIPS

EASY: Set-it & Forget-it! Set the PowerStrap position once, Enter&Exit through the reclining hiback. Or use the buckles to open & close the PowerStrap and Enter&Exit from the side.

Enter your Flow bindings (always enter FRONT foot FIRST):

On flatter areas: Heelside

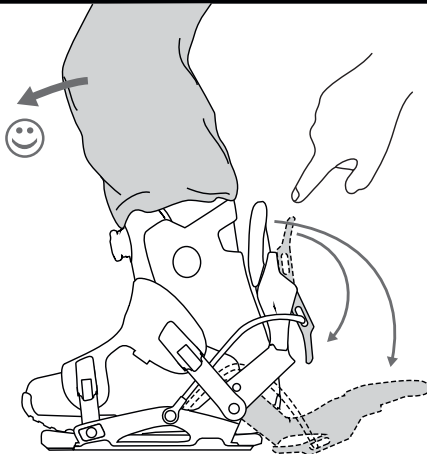

On steeper areas:
Face the hill toeside

Or use the buckles any time:
Dual-Entry

Exit from Flow bindings: Simply bend your knees and open the Snaplock lever (always exit REAR foot FIRST). Or use the buckles to exit from the side.

push lever away from hiback

do NOT try push lever downward

Adjust buckles & forward-lean

Practice getting in and out of your bindings and make sure the hiback can close securely and open freely. Your board should be attached to you with an approved retention device at all times while riding or walking. If a retention device is removed, for any reason, turn the board upside down and push the bindings securely into the snow to prevent runaways. Flow Snowboard bindings are "non-release", and are designed to remain affixed to your feet under most circumstances as set out per ISO14573. However, under some circumstances, bindings may become separated from your boot. Unusually serious injuries may occur when only one foot is secured in the bindings while riding. Use a Snowboarding helmet and protective body gear. Snowboarding is a hazardous activity with unexpected dangers. The use of snowboarding equipment, including getting "air" and the use of any natural or man-made terrain feature, involves the risk of serious personal injury to any part of the user's body, dismemberment or death. Hardware can loosen so always check your fasteners before you go riding, and make sure no other parts are broken or missing. While getting onto a chairlift, fold down the hiback of the unsecured foot. Familiarize yourself with any terrain before using it, including any natural or man-made terrain features. Obey all mountain rules and signs as well as all and any laws, regulations and Responsibility Codes. Do not rest your snowboard on your back boot to prevent damage to your boot. Flow recommends that any and all service and repairs to your bindings be done by a trained, professional mechanic.
