

SEASON 2026-27

[View all assets](#)

Symbiosis, n.

[sim-bee-oh-sis, -bahy-]

A relationship between multiple objects in which each depends on the others, resulting in a single system that reaches optimal efficiency.

It's a quest that has no end. Match the right board to the conditions and contours. Enhance the experience with the right stance, proper edges, and optimal wax. Amplify the moment with the right combination of turns, airs, and tempo.

The snowboard is our instrument. Selecting one that lets you play your own song is the first step to finding harmony in the mountains. Forty years in, I still ride for that feeling. It starts with a loose plan of descent, but the best music happens when the board takes over and the mind goes quiet. In these moments, the board becomes an extension of the body and the line between fantasy and reality disappears.

Finding this place begins with honesty about your ability and intent, then choosing the instrument that lets your song come through. I subscribe to the philosophy of "change your board, change your mountain." I'm an explorer of multiple tempos and turns; my instrument varies with snow and terrain.

Others are disciples of one - like my kids, Mia and Cass. Their hyper-commitment to progression, learning new tricks, and hitting new lines on the daily requires their board to be a constant. It frees their focus to unlock new performance levels with a deep understanding of how it will handle while they thread the line between success and failure.

Less talked about, but equally important, is your clothing. You know you've nailed it when it becomes an afterthought. But we all know the other side of that coin: being too hot, too cold, or soaked through can become all-encompassing.

Full symbiosis means nailing the whole kit, from what's under your feet to what's on your back. That's why we built Jones Outerwear. Five years in, our most complete outerwear line reflects our unwavering ode to progression. Test, tweak, repeat. Stagnation is not an option.

The lessons learned from a lifetime in serious mountains have been invaluable in this process. We've all seen the lone rider charging a line in movies or magazines, but what people don't see is the teamwork it takes to make it happen.

The same is true of the products in the pages ahead. There are no shortcuts. We surround ourselves with the best designers and engineers, and we build with the most responsible factories and the cleanest materials we can source. We learn by doing, and we give it everything we have.

This is our new high point, a lifetime in the making.

A close-up photograph of a hand wearing a tan leather ski glove, firmly gripping a black ski pole. The hand is positioned in the center-left of the frame, with the pole extending vertically downwards. The background is a soft, out-of-focus white, suggesting a snowy or bright environment. The lighting is natural, highlighting the texture of the leather and the metallic sheen of the pole's grip.

JONES

Rooted in Adventure
Obsessed with Performance
Committed to our Planet

PROUD MEMBER

WE BELIEVE THERE IS A BETTER WAY

Our Design Ethos

Eco-Performance

We strive to make products with the least impact on the planet possible, but we trust our lives to our gear so we must value performance foremost. We test new materials and production processes to make sure we never sacrifice performance or durability just to make a product more responsibly. Durability is also critical as the longer gear lasts, the less waste that goes to the dump. This ECO-Performance design philosophy is the foundation upon which everything we make is made.

Responsibility

To make gear in the most responsible way possible, we strive to minimize the impact of our materials and manufacturing processes however we can. All of our snowboards, splitboards and outerwear contain recycled materials, and they always have. Our boards are also made in a factory that runs on 100% solar power, and the fabrics we use in our outerwear are Oeko-Tex and/or Bluesign® certified - the two leading responsible material certifications in the apparel industry.

Innovation

From our groundbreaking board shapes to our trailblazing outerwear designs, we never settle for anything less than game changing gear performance. By keeping an open mind to new gear concepts, materials and production processes we aspire to do things differently, and make innovative gear and outerwear that blends comfort, durability and industry leading responsible manufacturing practices with standard setting performance.

Manufacturing

Our network of factory partners helps us set new responsible manufacturing standards.

Solar power

As of May 2020, all Jones snowboards and splitboards are made with 100% solar power. Switching our snowboard and splitboard production to 100% solar made an 89% reduction in CO₂ compared to non-solar powered production.

Socially responsible factories

All snowboards and splitboards are Fair Trade certified, an industry first. All of our outerwear and apparel is made in socially responsible factories that are Business Social Compliance Initiative (BSCI) and Worldwide Responsible Accredited Production (WRAP) certified. These certifications guarantee that the people who make our outerwear and apparel receive fair salaries and work in a safe and clean working environment.

Committed to our Code-of-Conduct

All of our factory partners have signed our Code Of Conduct that guarantees the people who make our gear are treated fairly and have safe working conditions.

2026-27 Hardgoods Highlights

NEW MODELS

Triple the choice: Expanding our FASE® binding collection

After the record-breaking debut of the Mercury FASE® binding, two new models join the line for winter 2027. The Zenith FASE® delivers power and ultra-fast response for advanced to expert-level riders, while the Nebula FASE® enhances tweakability and underfoot feel with a playful all-mountain freestyle flex.

NEW MODELS

Unleashed: The all-new Howler Split

The Howler has already earned a loyal following as the creative freerider's go-to snowboard. New for this season, the Howler Split gives riders the freedom to fuse freestyle with full-throttle freeriding while unlocking new terrain in the backcountry.

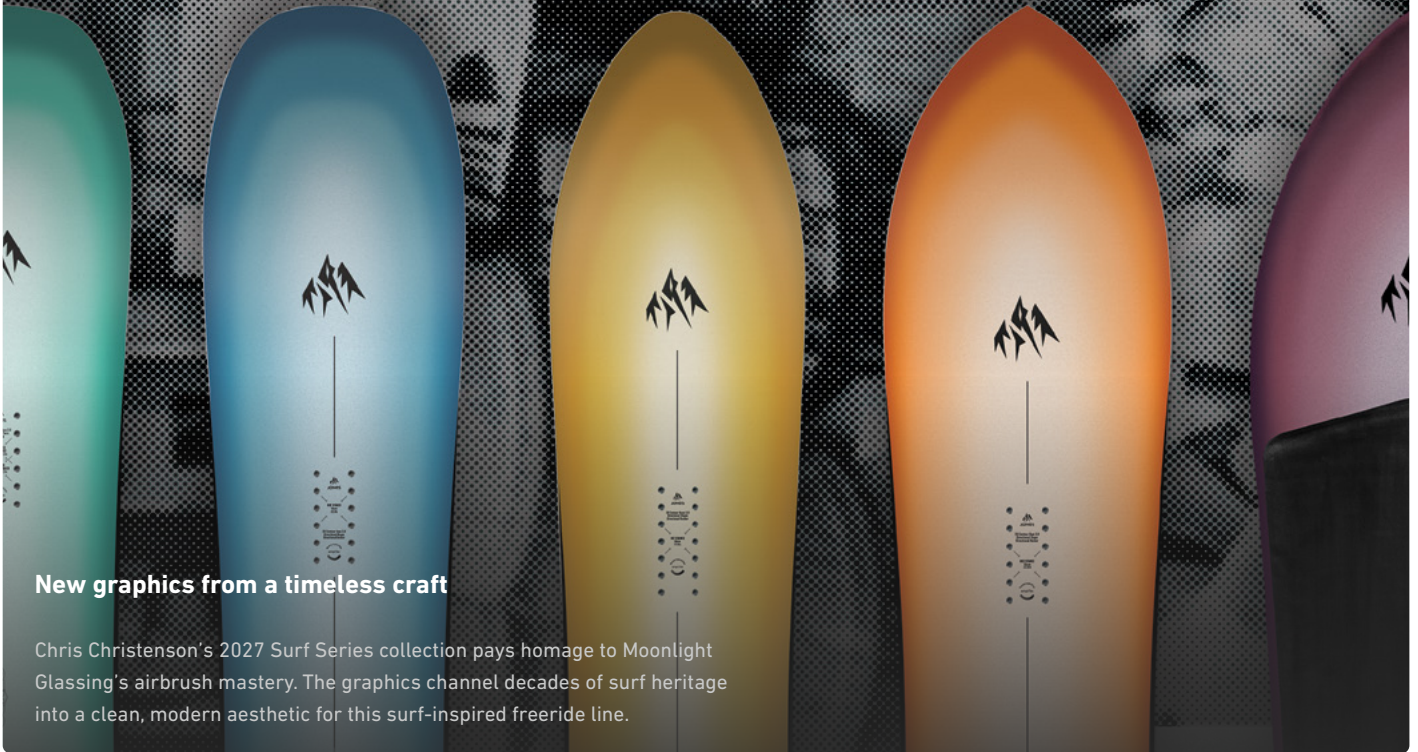

NEW SHAPE

Ride hard, tweak harder: New Tweaker 2.0 shapes

Ushering in the second generation of our team's go-to freestyle decks, the Tweaker 2.0 series was born in the park and built for the mountains. A redesigned true twin shape, 3D profile, and PRO construction option make this our most freestyle-focused, all-mountain-ready series yet.

NEW GRAPHICS

New graphics from a timeless craft

Chris Christenson's 2027 Surf Series collection pays homage to Moonlight Glassing's airbrush mastery. The graphics channel decades of surf heritage into a clean, modern aesthetic for this surf-inspired freeride line.

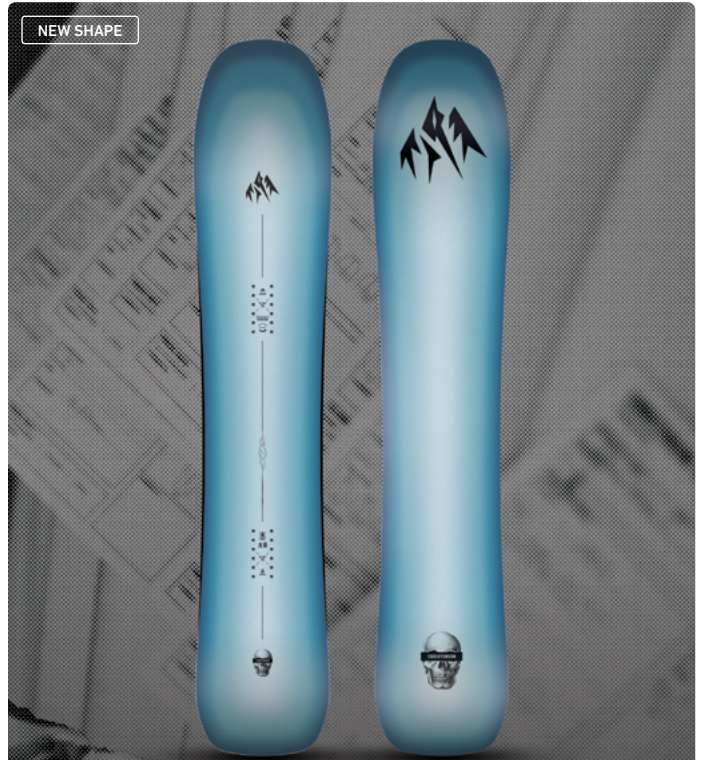

NEW MODEL

Introducing the TwinCraft: Float, pop, spin, repeat

The all-new, powder-focused directional twin with freestyle at its core. The new addition to the Surf Series combines an extra-wide waist width with a shorter running length and a tighter sidecut. It's made for effortless float, chucking tricks and nimble turns in powder - whichever way you point it.

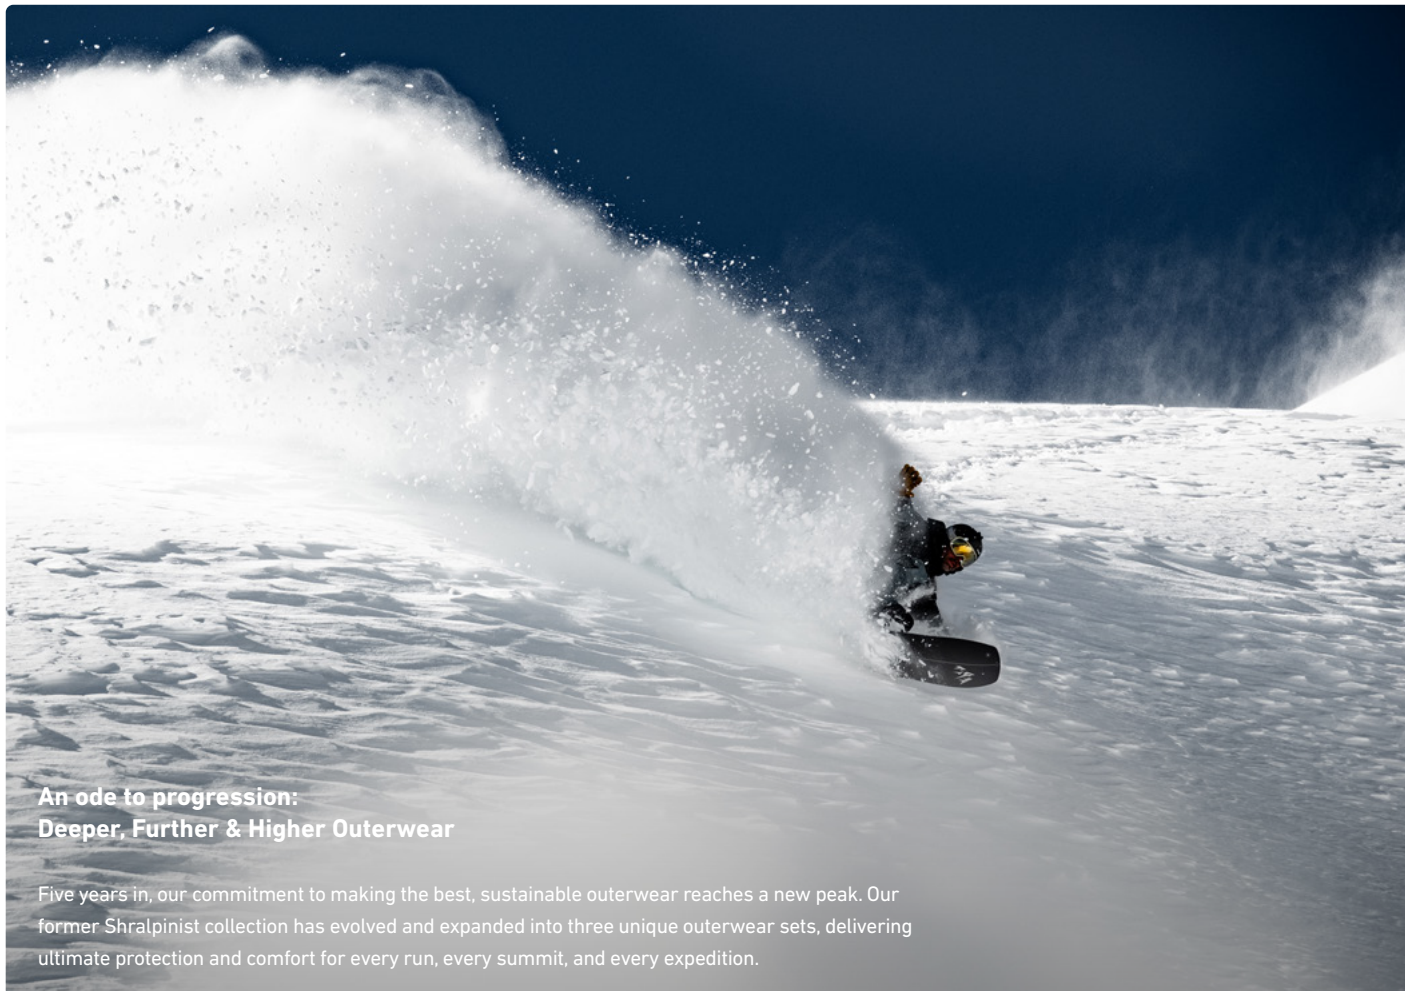

NEW SHAPE

Mind Expander 2.0: The cult favorite, reimaged

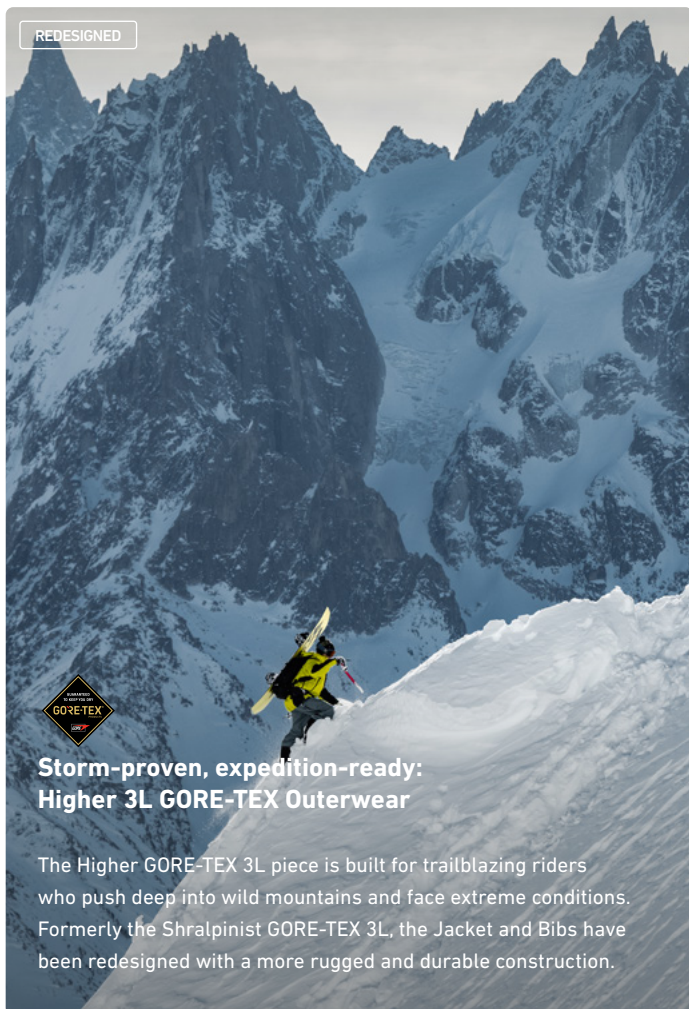

The cornerstone of the Surf Series enters a new era with a full redesign. A new shape, camber profile and dual radius sidecut ensure the Mind Expander 2.0 retains the legendary float of its predecessor, while delivering improved stability and handling for creative all-mountain freeriding.

2026-27 Softgoods Highlights

An ode to progression: Deeper, Further & Higher Outerwear

Five years in, our commitment to making the best, sustainable outerwear reaches a new peak. Our former Shralpinist collection has evolved and expanded into three unique outerwear sets, delivering ultimate protection and comfort for every run, every summit, and every expedition.

Storm-proven, expedition-ready: Higher 3L GORE-TEX Outerwear

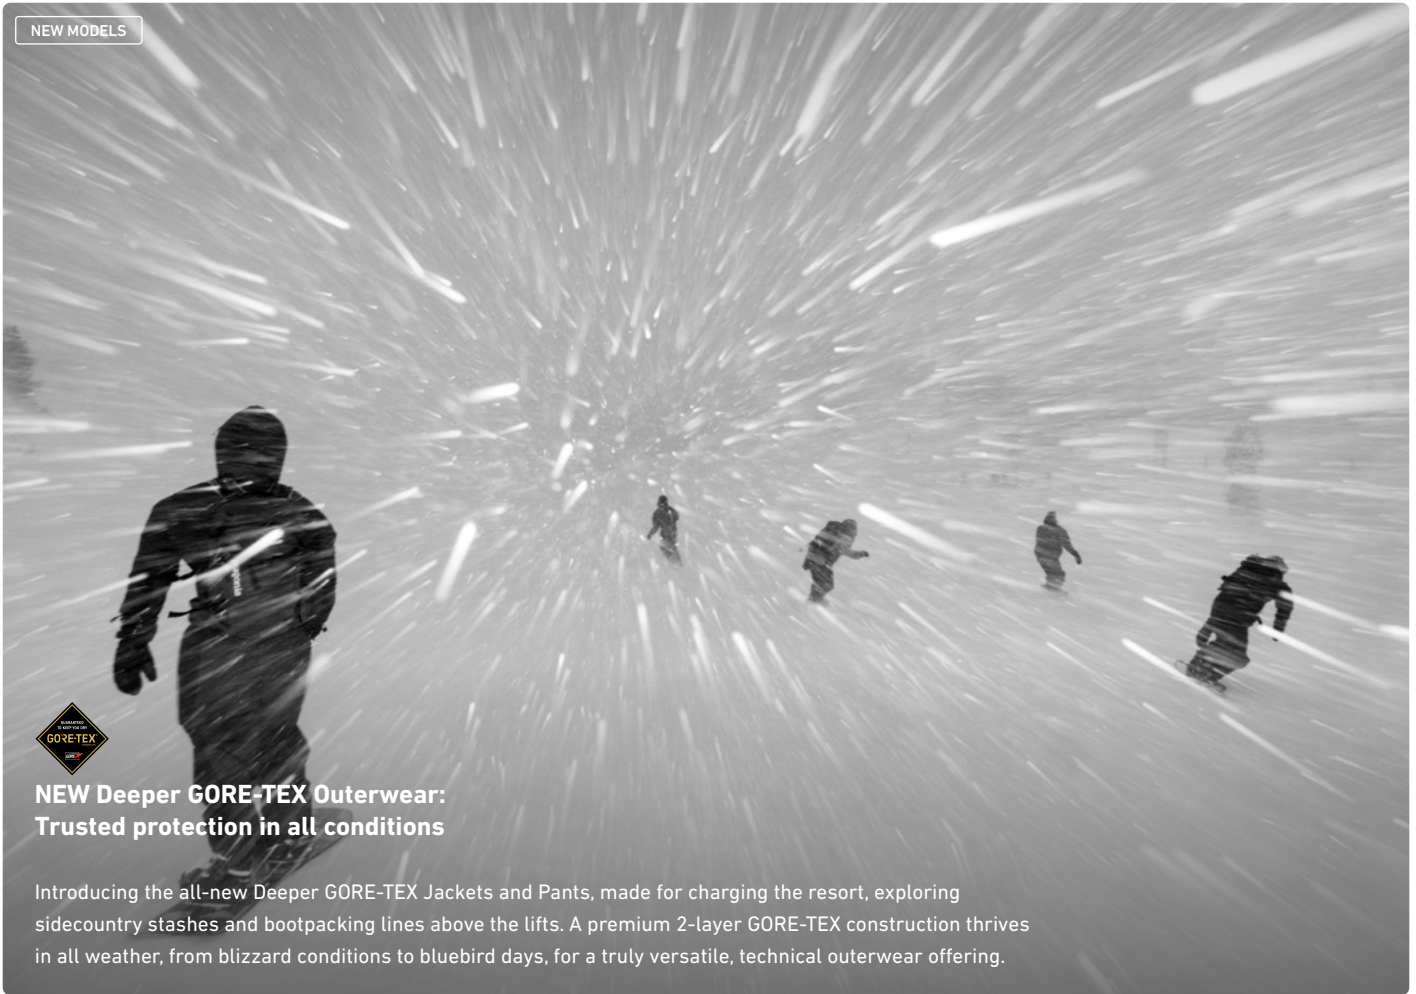

The Higher GORE-TEX 3L piece is built for trailblazing riders who push deep into wild mountains and face extreme conditions. Formerly the Shralpinist GORE-TEX 3L, the Jacket and Bibs have been redesigned with a more rugged and durable construction.

Made to go far: Further 3L Stretch Outerwear

The former Shralpinist Stretch 3L Jacket and Bibs have been redesigned and renamed for 2027. Featuring new jacket pocket placement and a switch from bibs to pants, the Further 3L Stretch Jacket and Pants deliver supreme comfort and all-conditions protection.

NEW MODELS

**NEW Deeper GORE-TEX Outerwear:
Trusted protection in all conditions**

Introducing the all-new Deeper GORE-TEX Jackets and Pants, made for charging the resort, exploring sidecountry stashes and bootpacking lines above the lifts. A premium 2-layer GORE-TEX construction thrives in all weather, from blizzard conditions to bluebird days, for a truly versatile, technical outerwear offering.

NEW MODEL

**When winter bites:
NEW Max Re-Up 750+ Down Hooded Jacket**

Maximum warmth meets packable performance in our new insulated jacket - the warmest we've ever made. Premium high-loft 750+ fill RENU recycled down delivers next-level protection from the cold, whether you're summiting or back at basecamp.

REDESIGNED

**Every layer counts:
Redesigned fleece collections**

From technical, performance-driven layering to soft, cozy pieces you can wear on the mountain or relax in after a day of riding, our fleece collections have been redesigned with updated materials for improved comfort, warmth, and breathability.

Triple The Choice.

MERCURY FASE®

NEBULA FASE®

ZENITH FASE®

The FASE® Binding System

The next-generation two-strap snowboard binding system

The FASE® Fast Entry System enhances the locked-in feel of traditional two-strap bindings, combined with an ultra-fast strapping-in process, while delivering unmatched high performance, all-day comfort, and a natural board feel.

Key advantages of the FASE® System

- Effortless fast entry and exit
- Enhanced locked-in feel
- True two-strap performance
- Instant on-the-fly adjustments
- Trusted by riders in every terrain and condition
- Mountain-proof durability with lifetime warranty
- Minimal weight and footprint
- Compatible with all snowboard boots

Learn more about the FASE® System on

jonessnowboards.com/fase

How do FASE® bindings work?

FASE® builds on the two-strap design by introducing three key ingredients. Each component plays a role, but it's the sum of these parts that makes the process of getting in and out of FASE® bindings so fast and intuitive.

The AutoBack

The key to the revolutionary FASE® Fast Entry System, the AutoBack, allows for hands-free entry into the binding. This intuitive design automatically closes as the boot enters the binding and opens when you lift your boot out. The AutoBack also folds flat for skating, chairlifts, and storage.

The FastStrap

An innovative long ankle ladder that remains connected for ultra-fast, one-handed strapping-in. With a classic ratchet design to fine tune ankle strap tension, the FastStrap complements the AutoBack's automatic closure system so riders can strap-in faster than ever before.

The Locked-In Toe Strap UPDATED

Simply set it and forget it. Designed to remain in position to complement the Fast Entry System, the Locking Slap Ratchet 2.1 and unique tri-toothed ladder allow you to 'set it and forget it' or make easy on-the-fly fit adjustments. Updated buckle system with an improved auto-lock mechanism.

“

Mercury FASE bindings set a new performance standard. They offer true board feel, all day comfort with fast entry and exit.

JEREMY JONES

“

The control and response I had in the FASE bindings was unmatched this past winter. The board feel they provided from edge to edge made me feel super confident in steep and technical terrain!

MARISSA KRAWCZAK

“

FASE, Fast Entry! On the first day of riding, I forgot I was on a new binding. The responsiveness and control is amazing.

VICTOR DE LE RUE

“

I got to really like the FASE bindings after a winter in them. Hardly had to adjust my strap-in process because it's so seamless, and I just got to be even faster rolling around the mountain all day.

HARRY KEARNEY

FASE® System Weight

The FASE® Fast Entry System is engineered to integrate seamlessly into Jones bindings. The mechanism itself weighs only 40 g (1.4 oz). In size Medium, the Jones Mercury FASE® weighs 870 g (30 oz), fully comparable to the Mercury without FASE® and other premium two-strap models.

FASE® System Volume

The system adds no noticeable volume underfoot. In size Medium, the Jones Mercury FASE® measures 294 mm in length, identical to the Jones Mercury without FASE® and equal to any standard binding footprint.

Binding Technology Overview

ZENITH FASE® NEW MODEL

AsymCore Carbon Highback

Stiff, carbon-injected highback built for maximum power transmission and ultra-fast response. Pre-loaded with more forward lean, a fully extended upper wing to wrap your boot, and our most responsive Asym Spine for turning power.

Fusion+ XR-C Baseplate

Carbon-injected, asymmetric, low-profile XR-C Baseplate delivers maximum response, power, and lightweight precision. Built on the Fusion+ Pad, a premium three-layer blend of EVA and TPU, for optimal impact protection and vibration absorption for hard-charging riders.

VertEx Ankle Strap

Two-part asymmetric strap blends soft PU foam with a structured VertEx Spine, providing a connected fit with immediate response and power transfer.

NEBULA FASE® NEW MODEL

AsymFlite Highback

Mid-soft highback delivers a playful, freestyle-friendly flex and shape. The Asym Spine delivers support and power where you need it, while the softer internal side provides the freedom to slash and tweak.

D-Fuse XR Baseplate

Asymmetric, low-profile XR Baseplate, made from a glass-nylon composite, delivers quick response and precise board control. A plush PU foam D-Fuse Pad cradles the baseplate for natural board feel and impact absorption that thrives in freestyle-friendly terrain.

SensiFlex Ankle Strap

Single-piece SensiFit Ankle Strap provides support through the centre with softer edges to conform around any boot for a truly connected and playful feel.

MERCURY FASE®

AsymFlex Highback

Mid-stiff highback features an asymmetric outline with an extended upper wing for enhanced turn performance. The softer internal side lets you tweak while the Asym Spine delivers more power to the external side.

Fusion XR Baseplate

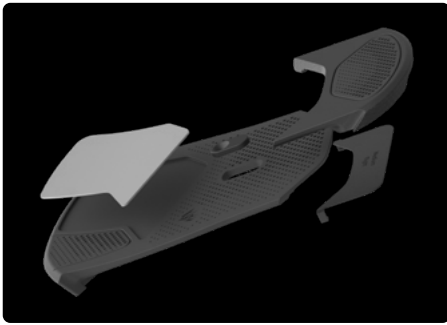

Asymmetric, low-profile XR Baseplate, made from a glass-nylon composite, provides instant response for all-mountain charging. The Fusion Pad's innovative three-layer TPU and EVA blend ensures dynamic impact protection and vibration absorption across any terrain.

DualFlex Ankle Strap

Asymmetric design features a stiff TPU core for lightning-fast response and softer TPU edges for all-day comfort and universal boot fit.

ZENITH FASE® NEW MODEL

ImpactCush+ Footbed

Engineered for powerful riding in demanding terrain, the ImpactCush+ Footbed uses higher-density foam to deliver quicker edge response and dialed-in precision. The sliding footbed integrates seamlessly with the FASE® System and features a 3° cant for enhanced turn response.

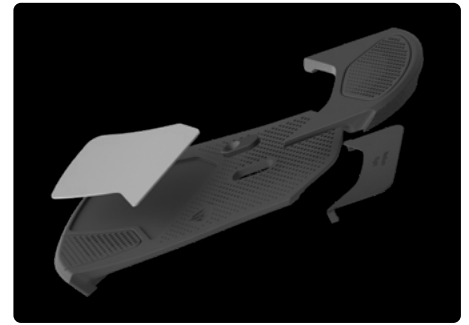

NEBULA FASE® NEW MODEL

ImpactPulse Footbed

Built for all-day comfort and functionality, the ImpactPulse Footbed features a 3° cant for a more natural stance and PU foam for superior vibration damping and impact absorption. Designed for the FASE® System, its sliding pattern enables smooth entry and exit with locked-in lateral grip when strapped in.

MERCURY FASE®

ImpactCush Footbed

Designed for all-day comfort, the ImpactCush Footbed soaks up board chatter in rough terrain and dampens the impact of heavy landings. The sliding footbed seamlessly integrates with the FASE® System and features a 3° cant for enhanced turn response.

ALL MODELS

Adaptive Fit Toe Strap

The Adaptive Fit Toe Strap features a flexible exterior outline that shapes to your boot, a denser center spine that ensures a secure lock, and a textured interior surface that grips onto your boot.

Alloy Buckles

High-grade aluminum buckles engineered for maximum durability.

LSR 2.1 Auto-Lock Toe Buckle UPDATED

Designed to stay in position to complement the Fast Entry System, the Locking Slap Ratchet 2.1 and unique tri-toothed ladder remain securely fastened while still allowing easy on-the-fly fit adjustments. Updated for 2027 with an improved auto-lock mechanism.

Universal Mounting Disk

All Jones bindings include a mounting disk compatible with traditional 4x4 inserts, 2x4, and the EST/Channel mounting system.

FEEL THE POWER IN EVERY TURN

Traditional Two-Strap Bindings

Freeride mode VS Surf mode

Jones bindings offer customizable dampening and response by switching between Surf Mode and Freeride Mode. Surf Mode lets you tweak harder, while Freeride Mode keeps you locked in for maximum response. Switch modes by changing the bushings from soft (Surf Mode) to hard (Freeride Mode) and adjusting the Flip-It ankle straps. The Flip-It strap allows you to

interchange the ankle straps between the left and right binding to create custom response. Ride with the ankle straps in Freeride mode for more lateral support and board response or flip the straps into Surf Mode for solid heel support, but more ankle flexibility for getting loose.

Freeride mode

- Position the wide half of the strap above the buckle for more lateral support and board response
- Use Hard Bushings for maximum response

Surf mode

- Position the wide half of the strap below the buckle for solid heel support but more ankle flexibility for getting loose
- Use Soft Bushings for a looser, more dynamic surf feel

4x4, 2x4, est/channel disk

All Jones bindings include a mounting disk compatible with traditional 4x4 inserts, 2x4, and EST/Channel mounting system.

ZyTech buckles

Ultra-strong levers made out of Zytel Fiber Composite material with strong stainless steel springs and axis. Triple action ratchet increase speed of entry.

Profiles

Directional Camber/Rocker

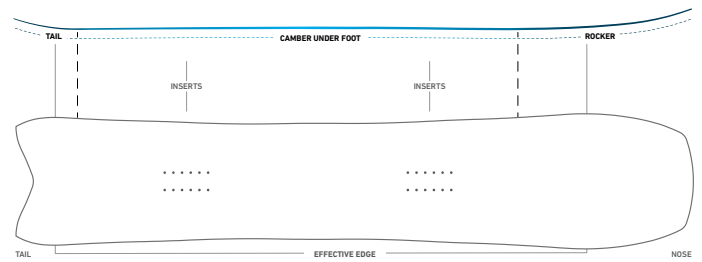

This profile is built around camber under your foot, giving you powerful edge hold, precise response, and confidence at speed. The nose features rocker that lifts the contact point for smooth turn initiation, effortless float in powder, and improved maneuverability in deep snow.

Cambered Tail for Control

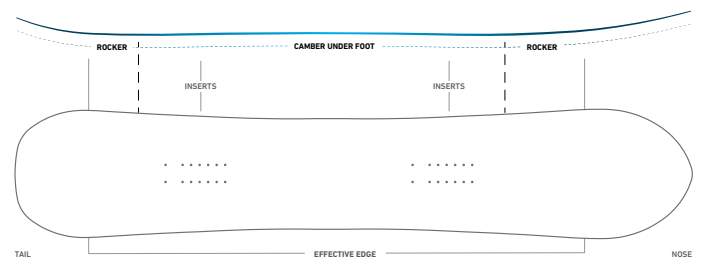

Some models feature a fully cambered tail, with no rocker. This design maximizes drive and stability, locking the edge for powerful carves and dependable control in steep, technical terrain.

Rockered Tail for Maneuverability

Other models, a touch of rocker in the tail makes the board easier to release out of turns, adds playfulness, and enhances maneuverability. The lifted tail brings a looser, more surfy feel when slashing or pivoting in all snow conditions.

DRAWING OF THE HOVERCRAFT 2.0, SIZE 160

DRAWING OF THE MEN'S FRONTIER 2.0, SIZE 159

“

My experience is that most falls in freeriding start from the nose of the board – you either go over the bars in powder, the nose gets caught under a weird crust and tosses you, or you hit a hard transition at the contact point of the tip and get bucked. Directional Camber/Rocker eliminates most of these falls.

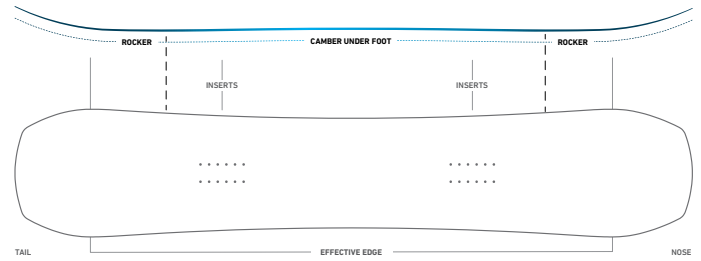

JEREMY JONES

CamRock

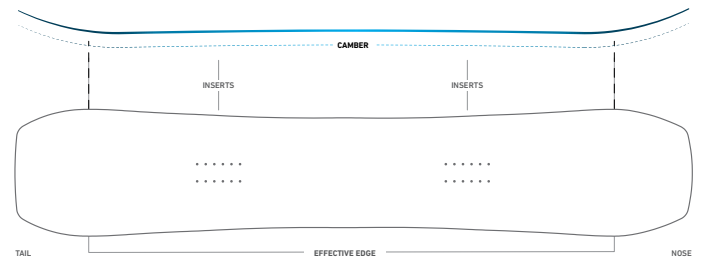

A unique all-terrain rocker/camber profile defined by evenly balanced tip and tail rocker with camber between the bindings. This blend delivers confident edge hold and responsive turns while keeping the tips loose enough for effortless float in powder. CamRock is our most versatile all-mountain profile, engineered to excel everywhere from piste to park to pow.

DRAWING OF THE MEN'S MOUNTAIN TWIN, SIZE 157

True Camber

A full camber profile that delivers maximum energy and edge response without the usual hang-ups. The continuous camber shape offers powerful turns, locked-in stability at speed, and unmatched pop for dynamic riding. True Camber is ideal for riders who want the highest level of control and precision, whether carving hardpack, charging steeps, or dropping lines in powder.

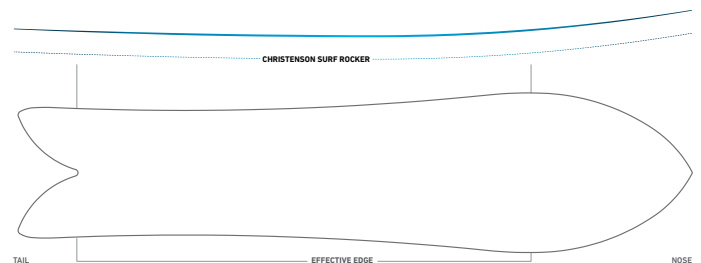

DRAWING OF THE MEN'S AVIATOR 2.0, SIZE 158

High Power Camber

Tip-to-tail full camber profile with a high camber along the effective edge for unmatched pop. The camber profile rises towards the tail and extends to the back binding for increased stomping power on the back foot.

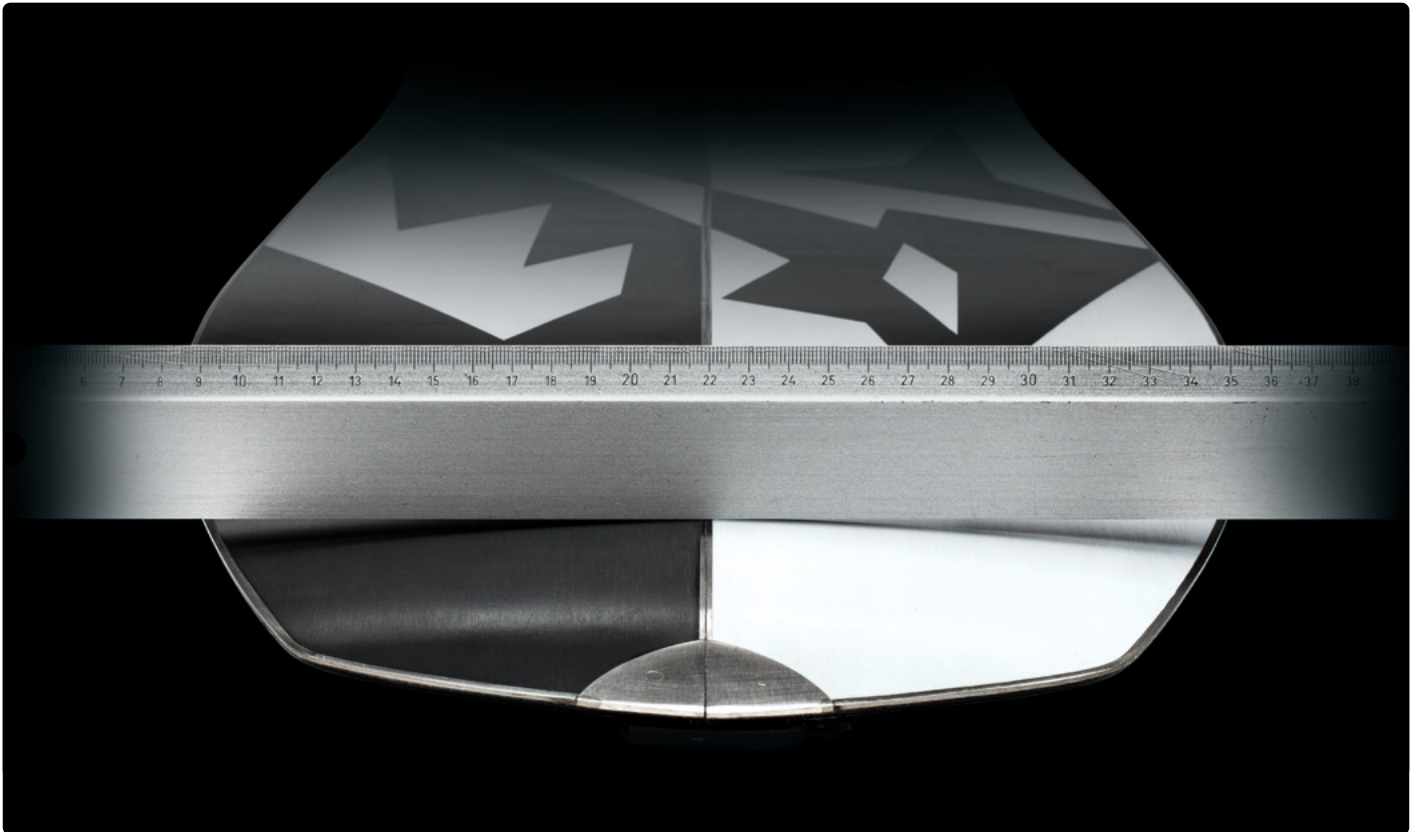

Christenson Surf Rocker

A custom surf-inspired tip/tail rocker profile designed by surf shaper Chris Christenson. When you weight the tail of the board the nose ramps up out of the snow for insane float on the deepest days. These subtle rocker contours match a Christenson surfboard rocker profile.

DRAWING OF THE MTN SURFER, SIZE 142

3D Contour Bases

Next level technology for ultimate response

Nobody wants a choppy and rough run. The descents you dream about are dynamic and smooth. Inspired by the rounded bottom contours of surfboards, 3D Contour Bases are designed to make every run smoother and every turn more effortless by reducing the drag of the board tips. 3D Contour Bases enhance glide and improve float helping you ride faster and with better flow.

Glide

3D Contour Bases enhance glide. The smooth radius of the nose and tail edges reduce friction at the contact points. With less friction and catch in the tips, you can maintain more speed.

Flow

3D Contour Bases deliver unmatched turn flow and fluidity. Just like the nose and tail on a surfboard, the rounded tip and tail edges eliminate catch as you transfer pressure edge-to-edge. Turn initiation is effortless because you can roll the board on to the edge instead of tip the board on the edge. Once on edge, camber and Traction Tech lock in your turn.

Float

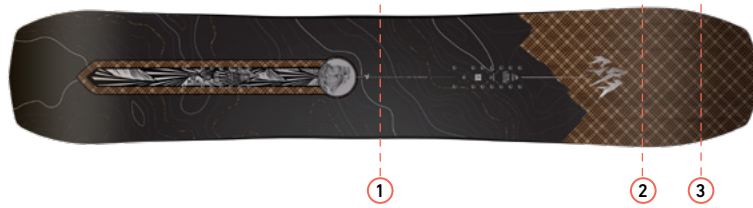

3D Contour Bases generate float. The subtle shaping in the nose and tail of the board helps to displace snow out from the base and lift the board's nose above the surface of the snow.

On a surfboard, the subtle shaping of the nose is what makes the entry into a turn so smooth and fluid. The feeling of an effortless surf turn is what inspired the development of our 3D Contour Bases. Instead of having to abruptly tip the board into a turn, 3D Contour Bases let you roll your edge into a turn. I've been on a quest to design a snowboard that offers the free friction glide and edge-to-edge fluidity of a surfboard for years. 3D Contour Bases cracked the code on how to achieve this next level of board performance.

JEREMY JONES

1 Center

The center of the board is perfectly flat with no spoon bevel on the edges between the contact points. The flat base allows instantaneous edge engagement between the feet when you lean into a turn.

2 Contact points

The spoon bevel starts just before contact point. The bevel increases very gradually so there is not an abrupt transition between the flat center of the board and the raised tip and tail edges.

3 Nose and tail edges

The spoon bevel is most defined at the tip and tail of the board. The rounded edges at the tips reduce edge catch and drag.

Riding flat

When riding flat, the spoon bevel on the edges is not engaged, but it does help smoothly deflect snow away from the nose of the board.

Turn initiation

As you begin to make a turn the spoon bevel helps you smoothly roll the board on to your edge with less friction and edge drag.

Mid-turn

In the middle of a turn camber and traction tech keep you locked onto your edge in the center of the board while the spoon bevel reduces the "plow effect" of your nose and tail edges.

The unique riding personality of each board in our collection demanded we develop multiple 3D Contour Base designs. Not every model would benefit from the same amount of spoon bevel. Each 3D Contour Base design is matched to the attitude of the board.

High 3D Contour Base

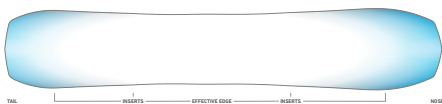

Freeride focused 3D Contour Base featuring 7mm of spoon bevel in the nose and 0 to 7mm of spoon bevel in the tail. Spoon bevel starts just before contact point.

Medium 3D Contour Base

3D Contour Base tuned for all-terrain featuring 4mm spoon bevel in the nose and 0 to 4mm spoon bevel in the tail. Spoon bevel starts just before contact point.

Low 3D Contour Base

Subtle yet effective 3D Contour Base featuring 2mm spoon bevel in the nose and 0 to 2mm spoon bevel in the tail. Spoon bevel starts just before contact point.

Innovative construction technologies

Jones PRO and Ultralight constructions showcase our meticulous craftsmanship and set industry leading performance standards

[PRO] Construction NEW

Our highest performance snowboards built for expert riders.

The PRO Construction combines our most advanced materials to deliver maximum power, precision, and durability. From basalt laminates to Koroyd inserts, every ingredient is selected to push board performance to its limit and deliver a competition-ready ride in all conditions.

- Full basalt laminate for torsional response, stability, and damping
- Fastest sintered base for superior glide
- Koroyd inserts to absorb vibration and reduce swing weight
- Reinforced edges for maximum durability
- Precision-engineered woodcores for the most technical flex and strength

[Ultralight Carbon] Construction

Ultra-responsive and weight-optimized for big mountain touring.

The Ultralight Carbon Construction is built for splitboarders taking on long tours, big vertical, and technical objectives where every saved gram means more energy for the ride. It delivers a ride that is powerful, stable and confidence-inspiring when it's time to drop in.

The construction starts with Fusion Carbon, combining carbon fiber and fiberglass for a board feel that is super responsive, stable and damp. Every element, from Koroyd inserts to our lightest Fusion Core, is engineered to maximize touring performance while maintaining durability and control in demanding terrain.

- Fusion Carbon construction with carbon fiber and fiberglass for ultralight response and stability
- Koroyd inserts absorb vibration, reduce swing weight and lower overall weight
- Fusion Core is our lightest and dampest woodcore with the best strength to weight ratio
- Bombproof thinner edges reduce weight without compromising durability
- Ultralight eco topsheets are durable and scratch resistant
- Ultra Base is our fastest sintered base for unmatched glide
- Karakoram Ultra Clips 3C provide the most secure and reliable splitboard connection

Ingredients

Built with the finest tech and materials.

100% of our adult models feature high-end materials, construction technologies and responsible manufacturing processes. We accept no compromises in producing the most durable and responsibly produced snowboarding gear.

- 100% Fair Trade Certified
- 100% Progressive Sidecut
- 100% Sintered Base
- 100% Recycled Abs Sidewall
- 100% Bio Resin
- 100% Wend Bio Wax
- 100% 3D Contours Base
- 100% Solar Built
- 100% Inner Edge Traction Tech
- 100% Responsible Woodcores

BASES

Sintered bases

All Jones adult models feature sintered bases. Our bases are made out of Ultra-High Molecular Weight polyethylene and are super durable and wax absorbent.

Sintered 8000 Base

Premium sintered base material that's ultra fast, highly wax absorbent, easy to repair and proven to be one of the most durable and long lasting base materials in the industry.

Sintered 9900 Base

High performance sintered base material with carbon additives that offers unrivaled speed, durability and wax absorption. Made in Austria.

Extruded 5000 Base

Premium extruded base material that is fast, durable, easy to repair, and offers consistent performance with minimal maintenance.

Ultra Base

Jones exclusive sintered base material with carbon additives for industry leading speed and wax absorption. Infused with multiple wax types for supreme glide in warm, wet and variable snow. Made in Austria.

Recycled Sintered 9900 Base

High performance sintered base material made from 50% virgin material and 50% recycled factory scraps that offers unrivaled speed, durability and wax absorption. Made in Austria.

Flip-Flop Base

Jones models with Flip-Flop bases are made in two base colorways to minimize P-Tex waste. Orders may be filled with either color and color does not vary by size.

TOPSHEET

Responsibly sourced topsheets

All adult Jones topsheets are made with materials that are responsibly sourced. Some of our models feature ECO-plastic topsheets and several feature wood veneer topsheets.

Premium Topsheet

Durable and scratch resistant premium topsheet engineered to endure rigorous daily use in extreme conditions.

Premium Eco Topsheet

Durable and scratch resistant bio-plastic topsheet made from castor beans that's engineered to provide exceptional abrasion and impact resistance while minimizing environmental impact.

Ultralight Eco Topsheet

Ultralight version of our castor bean sourced, bio-plastic topsheet that's engineered to be extremely durable and scratch resistant while minimizing environmental impact.

Flax Fiber

Carbon neutral flax fiber topsheet layer that's abrasion resistant and absorbs chatter in rough snow.

Ash Wood Veneer

Lightweight and super damp Ash wood veneer topsheet layer that eliminates edge chatter and delivers even flex and supreme torsional stiffness.

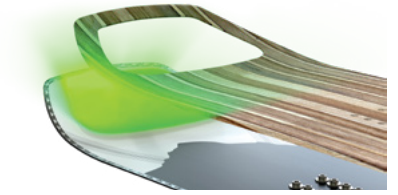

WOODCORES

100% responsibly sourced woodcores

All Jones woodcores are made with responsibly sourced wood. Every piece of wood we use in every board comes from a responsibly managed forest.

Koroyd®

Developed from aerospace technology, award-winning Koroyd synthetic core material is the lightest core dampening material we've ever tested. It absorbs vibrations and reduces tip swing weight, enabling quicker, smoother turns, and is added directly into the woodcore.

Master Core

Dual density wood core made out of responsibly harvested Paulownia and Poplar. 1:1 Paulownia to Poplar stringer ratio creates a lightweight core that's poppy and durable.

Power Core

Advanced triple-density full wood core made from responsibly harvested Bamboo, Paulownia and Poplar. Centered Bamboo stringers enhance durability, pop and torsional stiffness, while the Paulownia keeps the core light and damp.

Re-Up Tech Core

Groundbreaking wood core made out of responsibly harvested Paulownia and Poplar with specially positioned embedded stringers made from reclaimed snowboards.

Control Core

Premium dual density wood core made out of responsibly harvested Paulownia and Poplar. 2:1 Paulownia to Poplar stringer ratio creates a lightweight core that's damp and durable.

Boost Core

Advanced triple-density full wood core made from responsibly harvested Bamboo, Paulownia and Poplar. Bamboo stringers along the sidecut enhance durability, edge response and torsional stiffness, while the Paulownia keeps the core light and damp.

Ultra Split Core

Ultralight dual density wood core made primarily out of responsibly harvested Paulownia with pockets of Poplar that offers standard setting durability, pop and response.

Ultra Core

Ultralight dual density wood core made primarily out of responsibly harvested Paulownia with pockets of Poplar that offers standard setting durability, pop and response.

Fusion Core

High tech wood core crafted from select Paulownia with pockets of Poplar along the sidecut for added edge durability. Designed for Jones Ultralight models, it's our lightest core ever and offers a perfect strength-to-weight ratio.

Control Split Core

Premium dual density wood core made out of responsibly harvested Paulownia and Poplar. 2:1 Paulownia to Poplar stringer ratio creates a lightweight core that's damp and durable.

EDGES

Recycled edges

Since 2010, every Jones board has been made with partially recycled edges.

Recycled edges

Bombproof steel edges made from recycled German steel, engineered for maximum strength and long-lasting durability.

Inner thin recycled edges

Built to the same high standards as our recycled edges, but thinner and used only on the internal edges of splitboards for reduced weight.

SIDEWALLS

Recycled sidewalls

Every Jones board ever made was built with 100% recycled sidewalls.

Recycled ABS

Recycled ABS sidewalls with a rounded finish that are engineered to enhance durability by reducing topsheet chipping and impact damage.

OTHERS

Insert packs

Float Pack

Extra set of inserts allows super setback stance for deep pow days.

Freeride/Freestyle Pack

Allows option to center or set back stance on sidecut as conditions demand.

Carve Pack

Extra set of inserts allows more centered stance option for riding firm snow.

FIBERS

Premium laminates

For an even flex and unmatched durability and response, Jones boards are constructed with high quality fibers including Biax and Triax fiberglass, responsibly sourced flax and premium carbon.

Biax Fiberglass

Biaxial fiberglass laminate made with a dual-layer, dual-directional construction that delivers a forgiving yet snappy board feel with a mid-soft torsional flex and quick energy transfer.

Triax Fiberglass

Triaxial fiberglass laminate made with a triple-layer, multi-axis construction that delivers a precise and powerful board feel with a mid-stiff torsional flex for supreme response in variable snow conditions.

Basalt Fibers

Harnessing the power of nature, our PRO construction uses basalt fibers derived from volcanic rock. We layup $\pm 45^\circ$ basalt laminates for powerful energy transfer, exceptional durability, and dynamic flex across all PRO series boards.

Fusion Carbon

Ultralight Jones exclusive tip-to-tail carbon fiber and fiberglass construction that's engineered to reduce weight without sacrificing performance and response.

Stringer technologies

For unmatched vibration dampening in rough snow and lightning fast energy transfer initiating turns, we use only finely crafted stringer materials made with naturally sourced flax and responsibly sourced carbon fiber.

Bcomp Carbon Flax Stringer

Bcomp Carbon / Flax stringers offer the perfect performance balance as the carbon provides crazy pop and the flax sucks up chatter and reduces CO₂ emissions compared to a full carbon stringer. Developed in collaboration with the Swiss engineering firm Bcomp.

RESIN

Epoxy Matrix

100% of Jones boards feature Durabond Bio-Epoxy [27] for maximum durability.

Durabond Bio-Epoxy [27]

A bio-based epoxy made with 27% plant-based carbon that reduces CO₂ emissions by 33% compared to conventional petroleum-based epoxy. Sourced from plant-based industrial by-products, its unmatched bonding properties deliver industry leading durability and performance.

TUNED TO GO

100% ready to shred

Jones boards are de-tuned, waxed and ready to ride straight out of the wrapper.

Forever Flex

Forever Flex stabilizes a snowboard's flex and rocker profile for its lifetime. Boards are overbuilt, then 'broken in' using a process that mimics 20 days of riding and makes the flex more consistent from day one.

WEND Natural Wax

All Jones snowboards come factory waxed with WEND natural wax so they're ready to shred straight out of the shop.

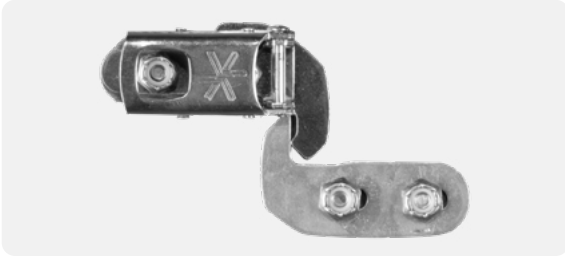

Factory Tuned

All Jones snowboards come factory de-tuned at the tip and tail so they're ready to shred straight out of the shop.

CLIPS

100% Karakoram Split Clips

All Jones splitboards feature premium Karakoram Clips that deliver unmatched compression and board lock.

Karakoram Ultra Clips 1.0

Karakoram Ultra Clips 1.0 remain some of the strongest and lowest profile clips in the industry. They are adjustable so you can maintain even compression as your splitboard ages.

Karakoram Ultra Clips 2.0

Karakoram Ultra Clips 2.0 are lighter weight, clamp tighter and have a smaller footprint than the original Ultra clip. They are adjustable so you can maintain even compression as your splitboard ages.

Karakoram Ultra Clips 3C

Karakoram Ultra Clips 3C feature an ultralight and durable three-point tension system. They are adjustable so you can maintain even compression as your splitboard ages.

Karakoram Tip-Lock Tip Clips 2.0

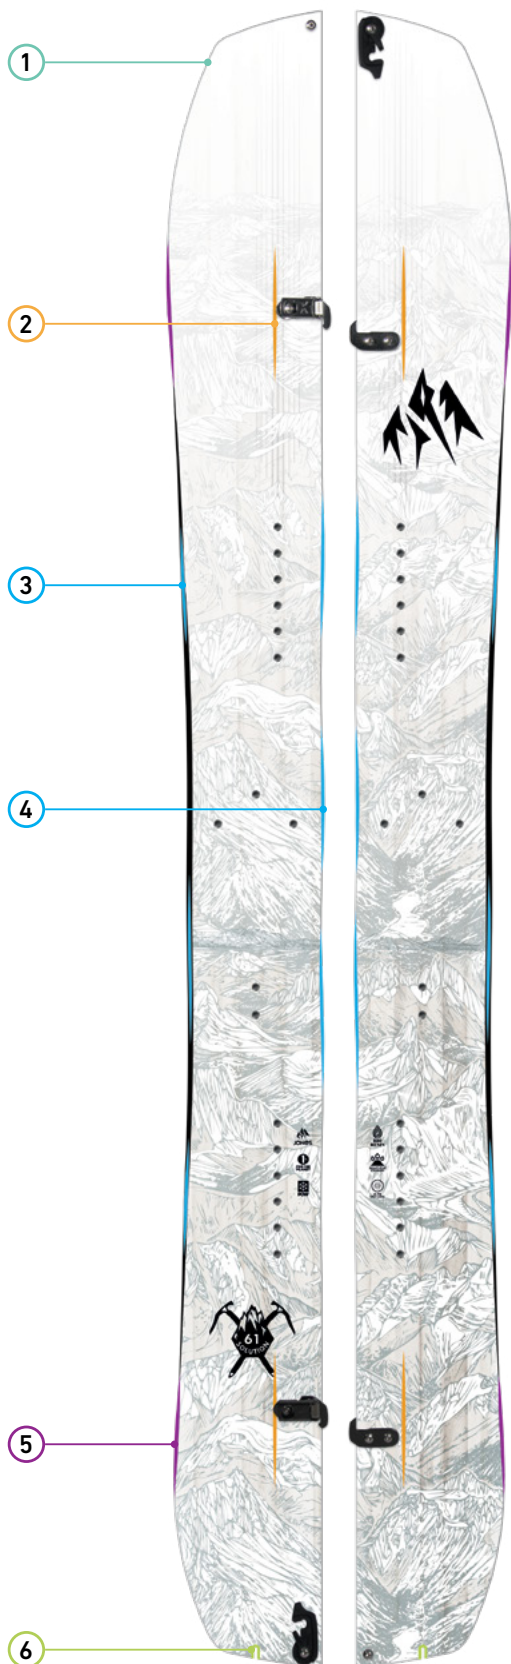

New and improved Karakoram Tip-Lock Tip Clips 2.0 lock your split together with the flick of the lever and stay tightly attached to your board all season.

Karakoram Tip Clips

Karakoram Tip clips made with durable ABS that swing closed and stay tight.

Shape Tech

1 Blunt nose

"How a board glides in powder, crust, corn or any snow more than an inch deep, is dictated by it's front contact point and just past it. Next time you are in soft snow watch how much snow comes over the corner of the nose near the contact point. The billowing snow coming out from behind the tip means you are plowing through it which is obviously slowing you down. By adding a blunt nose you get the float benefits of a much longer nose without the 'snow plow' rounded tip and it's extra swing weight."

– Jeremy Jones

2 Boltless bridge

The Boltless Bridge eliminates split clip attachment hardware from the base of the board by re-profiling the wood core at the clips. The wood core under the clips is thicker providing better torsional stiffness and a more powerful connection at the split clips.

3 Traction Tech

Like a serrated knife slicing into the snow, Traction Tech improves your edge grip by adding multiple contact points along the running length of your board.

"Traction Tech is a critical feature for rockered boards. Rocker improves glide in mixed conditions, but the decreased edge contact makes it harder to really lock into your turns and hold a solid edge. Traction Tech is crucial to offset the edge drift of rocker."

– Jeremy Jones

4 Inner edge Traction Tech

Inner edge Traction Tech improves splitboard edge grip on ascent. Three side cut "bumps" on each side of your bindings keep you locked in on icy skin tracks no matter which way you are traversing.

5 Progressive sidecut

At the far ends of the sidecut, the radius is incrementally increased as the edge reaches the contact point. Gradually increasing the sidecut radius towards the contact point delivers smoother turn initiation and exit as the edge tracks in and out of the snow with a less abrupt transition.

6 Quick tension tail

Built-in climbing skin tension system using pre-cut notch that eliminates the need for a traditional skin tail clip.

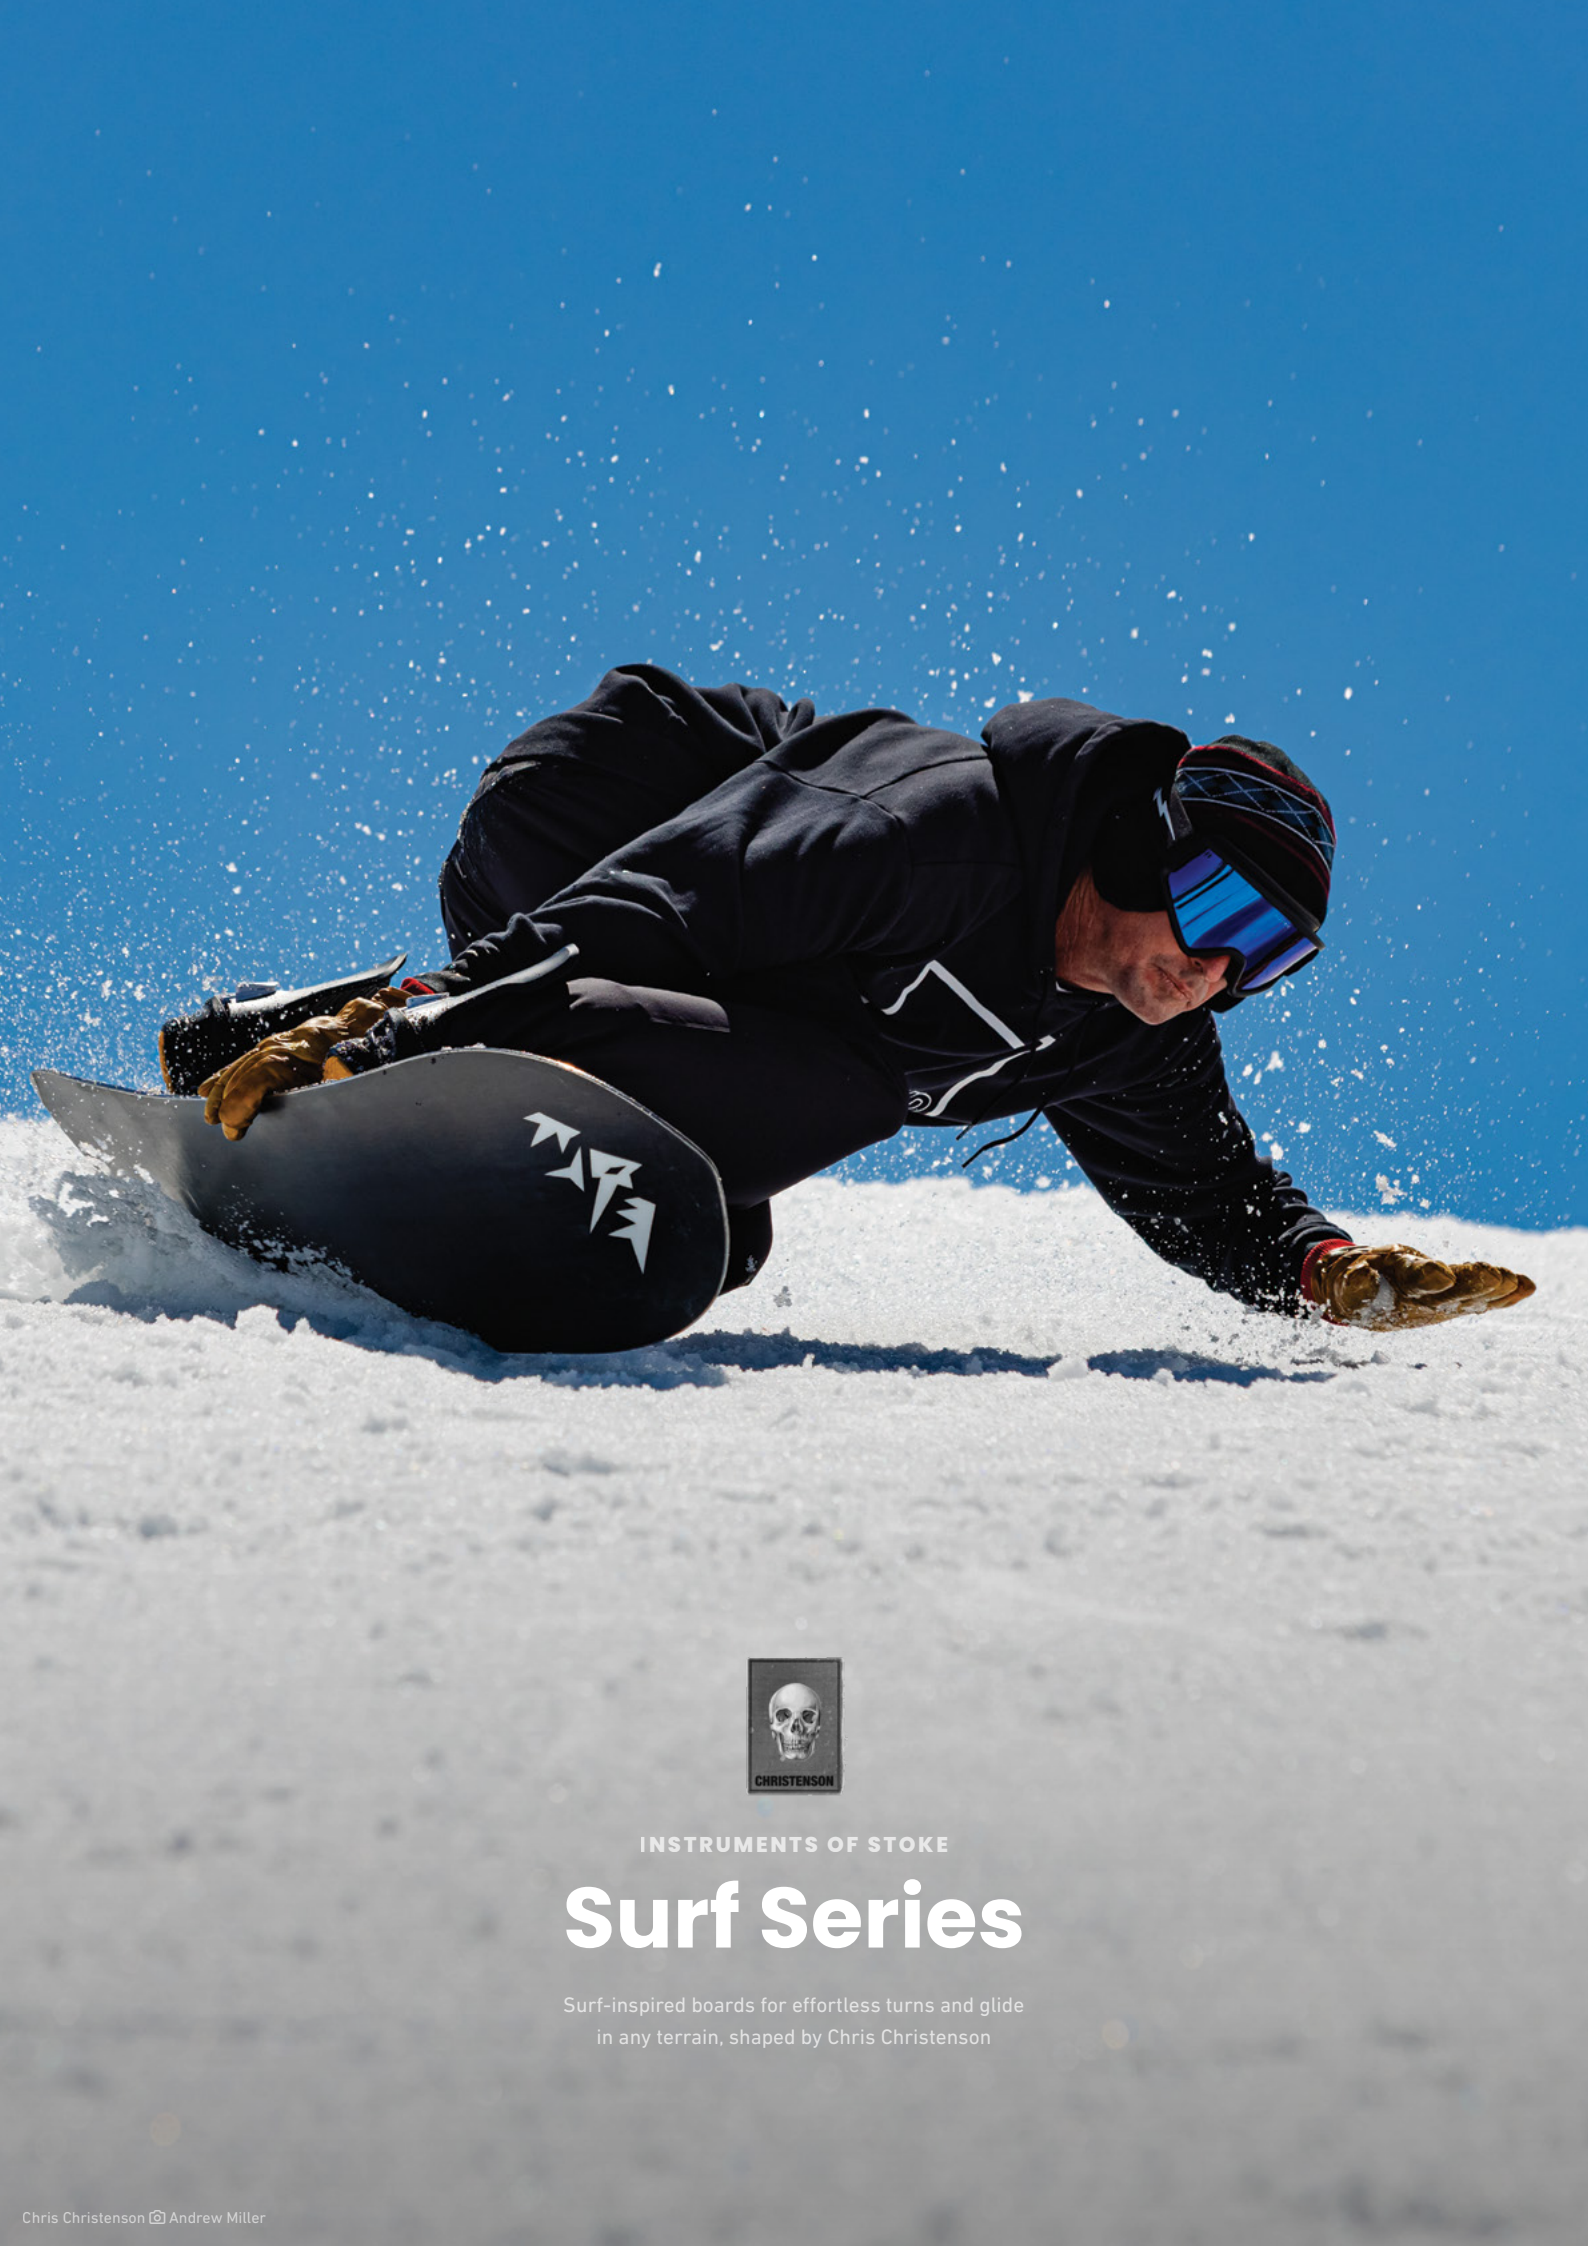

CRAFTED FOR ALL STYLES, ABILITIES, AND TERRAIN

Snowboards

Our mission is to design the ultimate snowboards with industry leading sustainable manufacturing practices.

INSTRUMENTS OF STOKE

Surf Series

Surf-inspired boards for effortless turns and glide
in any terrain, shaped by Chris Christenson

TwinCraft

The floaty freestyle powder twin

Surfy freestyle, playful, volume-shifted

Ideal for slashin' pow, poppin' pillows and tossin' tricks

The TwinCraft is a new hybrid board that blends the performance of a volume-shifted powder shape with the fun freestyle characteristics of a twin.

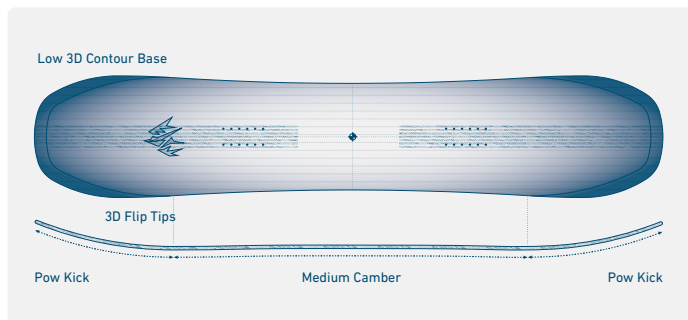

- Medium flex for friendly control
- Extra wide twin outline for powder x freestyle

Skin technology

Made in Switzerland

Jones skins are made in Switzerland by one of the most innovative and trusted skin manufacturers in the world, POMOCA. For the last 40 years POMOCA has produced industry leading skins for high altitude ski mountaineering and randonnee racing.

Rubber safer skins

Jones skins are laminated with a rubber backing that prevents skins from getting waterlogged. Drier skins are safer as they are less likely to lose adhesion to your skis in critical situations.

Glide tech

Glide Tech coating reduces friction on each skin fiber so neither super-cold fresh snow or wet, hot snow will stick to the skin and rob energy-saving glide.

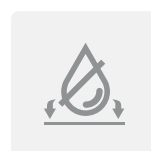

70 % Mohair / 30% nylon

Jones Nomad and Nomad Pro climbing skins are both made with a blend of 70% mulesing free natural mohair fiber and 30% synthetic nylon. The mohair offers unmatched glide and a supple skin feel while the nylon improves grip and water repellency.

Grip tech

Grip Tech skins are made with a special material that works well under dynamic tension and has a high resistance to twisting and abrasion.

Ever dry (bluesign® approved)

Jones skins are treated with Ever Dry anti-glopping treatment. The coating keeps the skins from absorbing moisture and prevents snow/ice build-up under the skin.

WE BELIEVE THERE IS A BETTER WAY

Eco-Performance

We believe there is a better way. A better way to manufacture apparel so that it does less harm, and lasts longer. A better way to protect yourself from nature's wrath without sacrificing comfort, mobility and breathability. And a better way to get more versatility out of fewer pieces, to design clothing that adapts to nature's moods.

From upcycled down to body mapped recycled fabrics, Jones outerwear is about making cutting edge apparel that performs just like we move through the mountains – with complex simplicity. One foot in front of the other, but no wasted steps, and no wasted energy. This is apparel we believe in every step of the way.

When we set out to start making apparel, this is what drove us. To do things differently, and bring new winter apparel concepts to the world that blend comfort, performance and sustainability in a fresh look and fit. Every piece in the collection is purposefully designed to be extremely functional to help you unlock your wildest dreams in the mountains.

Fabrics made without PFAS

Starting with our 2025 collection, all of our outerwear and apparel fabrics are made without PFOA/PFAS and we use only PFC-Free DWR treatments. PFOA, PFAS and PFC are chemicals known to accumulate in the environment.

Socially responsible factories

All our outerwear and apparel production facilities are Business Social Compliance Initiative (BSCI) or Worldwide Responsible Accredited Production (WRAP) certified. These certifications guarantee that the people who make our apparel receive fair salaries and work in safe and clean working environments.

Oeko-Tex® and/or Bluesign® certified mills

All of our fabrics come from Oeko-Tex and/or bluesign certified mills. Oeko-Tex and bluesign textiles and fabrics are certified to be free of harmful chemicals and safe for human use.

Organic Cotton

We use only 100% organic cotton in our lifestyle apparel. Organic cotton uses less water and chemicals than conventionally grown cotton.

All of our outerwear and apparel is built using recycled fabrics

Most are 100% recycled. Using recycled fabrics helps keep waste out of the landfill and reduces the need for virgin materials.

Recycled Down

We only use ultra high performance 100% recycled 750 fill power down that is upcycled from sleeping bags and jackets. Recycled down keeps materials out of the landfill.

Ingredients

Built with the finest tech and materials.

Jones apparel is the future of environmentally minded, movement focused technical gear built for pushing limits and erasing boundaries. The 2026-27 collection balances unmatched performance and durability with industry leading sustainable manufacturing and material standards. Backed by our lifetime warranty.

MATERIALS

Softgoods

GORE-TEX 3L Performance ePE NEW

Made out of 100% recycled waterproof breathable three-layer laminate shell fabric that is PFAS-Free. Solid protection for extreme use that's "Guaranteed To Keep You Dry".

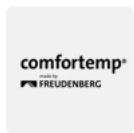

Products: Men's Higher GORE-TEX 3L Jacket & Bibs

GORE-TEX 2L ePE NEW

Made out of 100% recycled waterproof breathable two-layer laminate shell fabric that is PFAS-Free. Trusted comfort and protections that's "Guaranteed To Keep You Dry".

Products: Men's & Women's Deeper GORE-TEX Jackets & Pants

as you move through the mountains.

nes

Deeper 19L

The sleek sidecountry pack

Sidecountry, backcountry bare essentials
Ideal for sidecountry and quick tours

The Deeper 19L pack is a sleek sidecountry and quick tour pack that's the perfect size for the bare essentials - avy tools, water, snacks and a layer.

- Fleece lined goggle pocket + hydro pocket
- Thermo-molded foam back panel
- Hemet holder + ice axe loop
- Thermo-molded foam back panel
- Vertical board carry straps and side ski carry straps
- Avy tools slots + zippered internal pocket

Materials

100% recycled 600D ripstop polyester shell, 100% recycled polyester lining, PFC-Free DWR

Features

- | | |
|-----------------------------------|------------------------------------|
| A-frame split-ski carry mode | Hydro pocket with insulated sleeve |
| Ergonomic comfort shoulder straps | Integrated safety whistle |
| Internal zipper with key clip | Ice axe loop |

Further 25L

The mid-size tour pack

Mid-size, comfortable, streamlined fit
Ideal for intermediate backcountry tours

The Further 25L is a mid-size touring pack designed to hold everything you need for a basic backcountry mission.

- Fleece lined goggle pocket + hydro pocket
- Dual hip pockets + thermo-molded back panel
- Hemet holder + dual ice axe loops
- Thermo-molded foam back panel
- Vertical board carry straps and side ski carry straps
- Avy tools pocket with avy rescue protocol info panel

Materials

100% recycled 600D ripstop polyester shell, 100% recycled polyester lining, PFC-Free DWR

Features

- | | |
|------------------------------------|---------------------------|
| A-frame split-ski carry mode | Integrated safety whistle |
| Ergonomic comfort shoulder straps | Dual ice axe loops |
| Internal zipper with key clip | Dual hip belt pockets |
| Hydro pocket with insulated sleeve | Hip belt gear loop |

Higher 32L

The perfect splitboarding pack

All-day tours, back access, streamlined fit
Ideal for long technical backcountry tours

The Higher 32L is designed for long splitboard tours and technical objectives that demand you carry the full kit.

- Fleece lined goggle pocket + hydro pocket
- Dual hip pockets + thermo-molded back panel
- Helmet holder + dual ice axe loops
- Thermo-molded foam back panel
- Vertical board carry straps and side ski carry straps
- Avy tools pocket with avy rescue protocol info panel

Materials

100% recycled 600D ripstop polyester shell, 100% recycled polyester lining. PFC-Free DWR

Features

- | | |
|--------------------------------------|------------------------------------|
| A-frame split-ski carry mode | Hydro pocket with insulated sleeve |
| Back panel cargo access | Integrated safety whistle |
| Ergonomic comfort shoulder straps | Dual ice axe loops |
| Internal zipper pocket with key clip | Dual hip belt pockets |
| Water bottle pocket holder | Hip belt gear loop |

Escape Board Bag

The fully padded classic board bag

Lightweight, easy to carry, durable
Ideal for road trips, bus, train and quick plane travel

The Escape Board Bag is a fully padded bag designed for basic travel trips with your shred gear.

- Fully padded shell for solid protection
- Zippered exterior pocket for small gear
- Exterior ID window pocket
- Water resistant PVC-free exterior fabric
- Side carry handles and removable shoulder strap for easy transport
- Fits boards up to length 166cm

Materials

100% recycled 600D ripstop polyester shell, PFC-Free DWR, 100% recycled polyester lining

Features

- | | |
|---------------------------|--------------------------|
| Zippered interior pocket | Side carry handle |
| Removable shoulder strap | Fits up to a 166cm board |
| Exterior ID window pocket | |

Adventure Board Bag

The lightweight roller bag

Basic roller, fully padded, durable

Ideal for long distance road trips and place travel

The Adventure Board Bag is a lightweight, fully padded roller bag built to carry your board and shred gear on long distance travel trips.

- Fully padded shell for solid protection
- Oversized wheels and skid plate
- Internal compression straps to secure boards
- Water resistant PVC-free exterior fabric
- Zippered top lid pocket for accessories + window ID pocket
- Fits multiple boards up to length 166cm

Materials

100% recycled 600D ripstop polyester shell, PFC-Free DWR, 100% recycled polyester lining

Features

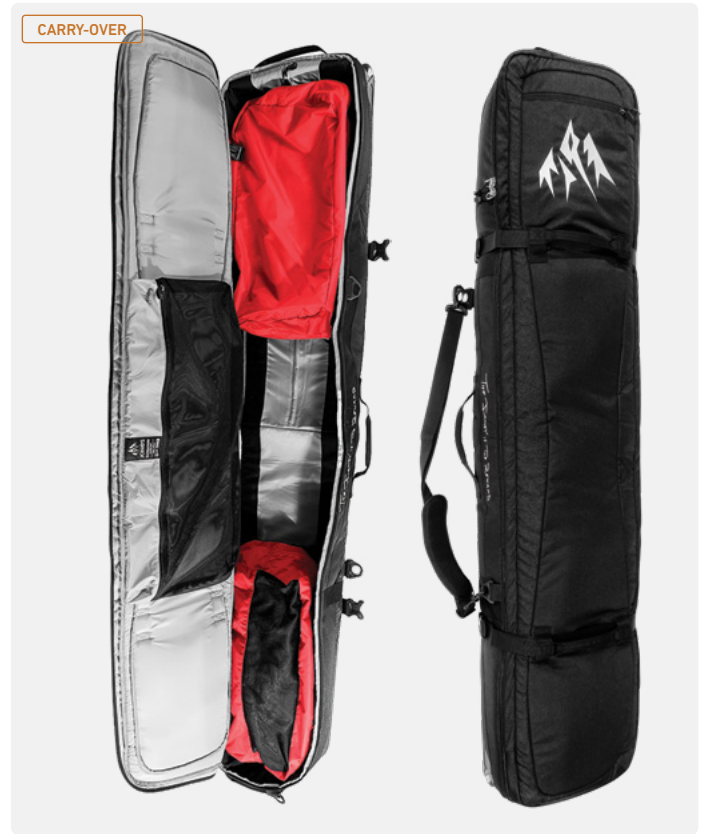

- Zippered interior pocket
- Exterior ID window pocket
- Top and side carry handles
- Fits up to a 166cm board

Expedition Board Bag

The ultimate roller bag

High volume roller, multiple pockets, durable

Ideal for long distance trips and international explorers

The Expedition Board Bag is a fully padded roller bag built to carry multiple boards and gear to any snowy location on the planet.

- Fully padded shell for solid protection
- Oversized wheels and skid plate
- Dual compression + main pocket board straps
- Water resistant PVC-free exterior fabric
- Zippered interior & exterior pockets, plus two removable pouch pockets
- Fits multiple boards up to length 166cm

Materials

100% recycled 600D ripstop polyester shell, PFC-Free DWR, 100% recycled polyester lining

Features

- Zippered interior pocket
- Exterior ID window pocket
- Removable shoulder strap
- Main pocket board strap
- Zippered, mesh interior pockets
- Dual, side, top & end carry handles
- Fits up to a 166cm board

TEST. TWEAK. REPEAT.

Big Horn Series

Big feet? We've got you covered

The Big Horn Series identifies the boards in the Jones line designed for riders with big feet. These boards have a 26.3 cm or wider waist width for added performance on steep and hard snow. If you wear size US 11 boots or larger, look for the Big Horn Series sizes of most board models.
