

JONES

NOMAD

Jones Nomad Climbing Skins are premium splitboard skins that offer the ideal balance of glide, grip and durability. The Nomad skin fibers are 70% Mohair and 30% Synthetic Nylon. The natural mohair fibers deliver exceptional glide in any snow condition because they remain soft and flexible at any temperature. The nylon fibers provide extra traction when the skin track gets steep or icy and improved durability over 100% Mohair skins. Nomad skins are PFC-free and are coated with Bluesign-approved EVER DRY 3.0 Anti-glopping treatment to improve performance in wet snow. Jones Nomad PRO Skins are also laminated with RUBBER SAFER SKIN backing. This rubber layer keeps the skin from absorbing water and makes the skins easier to pull apart. Nomad skins are available in two models: Trim-To-Fit with Universal Tail Clip and Pre-Cut with Quick Tension Tail Clip.

NOMAD PRO

Jones Nomad PRO Skins are the ultimate high performance splitboard skins in any snow condition. The Nomad Pro skin fibers are a blend of 70% Mohair and 30% Synthetic Nylon fibers. This combination of natural and synthetic fibers provides the perfect balance of glide, grip and durability. Nomad Pro skins are PFC-free and have been coated with both Bluesign-approved EVER DRY 3.0 Anti-glopping treatment to improve wet snow performance and GLIDE TECH treatment which helps maintain the glide for the lifetime of the skin. Jones Nomad PRO Skins are also laminated with RUBBER SAFER SKIN backing. This rubber layer keeps the skin from absorbing water and makes the skins easier to pull apart. Nomad PRO skins are available in two models: Trim-To-Fit with Universal Tail Clip and Pre-Cut with Quick Tension Tail Clip.

CARE

- ⦿ Skin glue performs best when clean and dry. Avoid getting snow, dirt, grass, gravel or wax on the glue side of your skins.
- ⦿ Inspect your skins during transitions and clear off any built up snow before you pack away your skins for the descent.
- ⦿ Clean off snow by standing ski upright in snow, holding one end of skin in each hand, and pulling skin across split ski edge like a saw.

STORAGE

- ⦿ After use, dry your skins in an airy place at room temperature. **Avoid drying in direct sunlight or in direct heat from stoves, heaters, etc., High temps can cause damage to the adhesive coating of the ski skins.**
- ⦿ Use the Jones Skin Bag to store your dry skins (never store them wet), especially if you won't use them for a long period of time.
- ⦿ Regularly check the skin glue. If you notice that your glue is very dirty or in bad condition it's time to reglue your skins. Professional re-glue services are available in many areas and at-home reglue kits are available worldwide.

Always store your skins in a cool dark place free from excessive humidity and dryness. Place the backing sheets between the skins for long term storage. Fold skins one against the other, glue to glue, for short term storage.

TECHNOLOGY

70% MOHAIR / 30% NYLON

Jones Nomad and Nomad PRO climbing skins are both made with a blend of 70% natural mohair fiber and 30% synthetic nylon. The mohair offers unmatched glide and a supple skin feel while the nylon improves grip and water repellency.

GRIP TECH

Grip Tech skins are made with a special material that works well under dynamic tension and has a high resistance to twisting and abrasion.

EVER DRY

Jones skins are treated with EVER DRY anti-glopping treatment. The coating keeps the skins from absorbing moisture and prevents snow/ice build-up under the skin.

GLIDE TECH | NOMAD PRO EXCLUSIVE

Glide Tech coating reduces friction on each skin fiber so neither super-cold fresh snow or wet, hot snow will stick to the skin and rob energy-saving glide.

RUBBER SAFER SKINS

Jones Nomad and Nomad PRO skins are laminated with a rubber backing that prevents skins from getting water logged. Drier skins are safer as they are less likely to lose adhesion to your skis in critical situations.

WARRANTY

2 Years

TRIM INSTRUCTIONS

- 1 Slide tip clip over nose of split-ski and center skin on ski with excess hanging off both sides.
- 2 Begin removing adhesive backing and adhere skin to ski starting at tip and moving toward tail. Align skin parallel to inner edge but offset from inner edge by twice the width of metal edge. 2-3 mm of base material should be showing between skin and metal edge.
- 3 Using trim tool or razor knife, cut excess skin material from outer (sidecut) edge.
- 4 Reposition skin, center on ski and check trim. Metal edge should be visible on both sides of skin.
- 5 Insert tail strap through tail clip and place on split-ski. Adjust tail strap length so 8-15 ladder strap teeth are visible beyond clip.
- 6 Mark tail strap rivet hole position on skin using tail strap as guide. Confirm strap hangs evenly vertical from clip before marking.
- 7 Trim skin length. Cut 2 cm longer than tail strap hole markings.
- 8 Attach tail clip to ski and let tail strap hang vertically onto skin. Confirm that previously marked tail strap hole positions align with clip and that rivet holes will be at least 1 cm away from end of skin.
- 9 Remove skin from ski. Hammer a nail or poke sharp object through marked hole positions.
- 10 Push male rivets through holes in skin with rivet head on plush side. Lay tail strap on rivets with glue side of skin against tail strap.
- 11 With male and female rivets aligned on either side of skin strap and skin, hammer rivets closed on hard metal or concrete surface.
- 12 Once tail clip is attached, fold skin in half aligning tip and tail evenly. Trim skin tail shape to match nose shape.
- 13 Go climb a mountain!

QUICK TENSION TAIL CLIP

The Quick Tension Tail Clip is a lightweight tail clip system designed to fit all 2016 and newer Jones splitboards (except Discovery). Jones splitboards have a notch cut into the tail of both skis that allows the Quick Tension Tail Clip to simply slide into the notch and secure the skin.

Quick Tension Tail Clip fits all Jones splitboards except the Discovery Split and Youth Solution.

Nomad and Nomad PRO skin group varies by board model and size.

Please confirm needed skin group before purchase.

UNIVERSAL TAIL CLIP

The Universal Tail Clip is designed to keep skins locked on in the most challenging snow conditions. The clip anchors on both the inner edge and outside tail edge and provides adjustable skin tension using the attached stretcher strap. Four solid rivets anchor the stretcher strap to the skin. The Universal Tail Clip is compatible with all splitboard brands.

SIZE

Compatible with all splitboards <172 cm
Skin dimensions: 140mm x 1450mm

SKINS PACKAGE INCLUDES

(2) Skins, (2) Universal Tail Clip, (2) Backing Sheets,
(1) Skin Cutter, (1) Skin Bag
